Intel Core i7-4770K

The fastest quad-core desktop chip is here

Features 85
Performance 90
Value for money 75

Specifications

Cores/Threads: 4 / 8;
Base clock: 3.5GHz; Turbo
clock: 3.9GHz; Integrated
graphics: HD 4600; L3
cache: 8MB; Package:
LGA 1150

The Haswell processors use the same 22nm process node with some changes to the micro-architecture. The major changes include getting the voltage regulator from the motherboard onto the processor. The Fully Integrated Voltage Regulator (FIVR) takes in a single input and splits it into various rails for components such as PCIe controller, memory controller, etc. Haswell will require a new LGA 1150 socket, although the 1156-based coolers will work. We see new integrated graphics in the form of Intel HD 4600 which has 20 execution units, four more than the HD 4000.

We tested the processor using an Intel DZ87KLT-75K board and 8GB of Kingston HyperX DDR3 RAM @ 1600MHz. Cinebench R11.5 (multi-core): 8.08; x264 HD benchmark 2nd run: 44FPS; WinRAR compression/decompression: 3637 KB/s.

Price
₹23,999

The scores obtained were around 8-10 percent higher than the Core i7-3770K and between 15 to 25 per cent higher than Core i7-2600K. Even the integrated graphics performance has improved with STALKER: Call of Pripyat giving a playable 30 FPS at 1680x1050 at medium settings with tessellation enabled.

We could overclock the processor to upto 4.6GHz on air using the Cooler Master Hyper T4 cooler.

So on the whole, an improvement for sure. But Haswell investment involves a processor and a board. For Ivy Bridge users, it does not make sense to move. Sandy Bridge users may consider the Core i7-4770K, but for users having older systems still, Haswell is an interesting platform. For those confused with upgrading to desktop or a laptop, we would suggest waiting out till the Haswell mobile chips are out as they claim to improve battery life by unprecedented levels.

Corsair Vengeance K70

Gaming and typing re-defined

We reviewed the Corsair Vengeance K90 previously and were smitten by its design and features. Since the K90 was primarily meant for MMO gamers with its slew of G-keys and profiles, the Vengeance K70 is built keeping FPS gamers in mind.

The keyboard comes bundled with extra WASD and combined 1-6 number keys that are contoured or textured to aid you while gaming. Replacing the existing keys has been made easy by including a key removal tool.

The K70 shines when it comes to its build quality as it has a brushed aluminium top with a sturdy build so the K70 may last for a long time. We especially liked the backlighting of the K70

as it has individual LEDs for each key to provide uniform illumination across the keyboard.

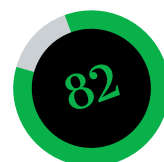

The K70 has a button to change the brightness of the backlight and you can also illuminate individual keys depending on your preferences. The K70 has a reactive backlighting option which illuminates particular keys as you press them.

Since the K70 uses Cherry MX Red mechanical switches with 45g actuation force, the keys provide a good response and feedback.

A soft layered detachable wrist rest has also been included. The K70 being a feature rich gaming keyboard, it is very expensive and caters to a niche audience with deep pockets. You won't regret buying it though.

Price
₹9,300
