F&D A511

Looks like size doesn't matter

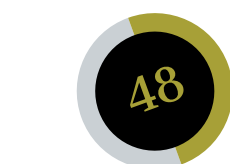

Price
₹3,490

The subwoofer unit on this 2.1 channel speaker set bears a little sticker proudly proclaiming its driver size – an above average 6.5 inches. Naturally, one would assume it to be an above average performer too. Sure, there's a lot of bass but it's very loose, making individual notes nearly indistinguishable. The crossover unit is most likely not tuned perfectly; it ends up sending

lower range frequencies to the satellites, making them distort at anything over 60 percent gain. The lower mids is where the problem is more pronounced and reproduction of other frequencies is at par with speakers in this price range.

The build quality and design is nothing to write home about either. The satellite housing reverberates and the dome tweeter grille seems to be purely an attempt at aesthetics – there's no transducer behind it! Dance numbers will sound pretty decent, but switch to anything with high instrument density (rock and metal) and the performance is lackluster. The speaker set is a very recent entrant, launched late May, and has yet hasn't surfaced yet on popular online retail destinations, but reportedly will have a street price of ₹2,990. A better option in that case is to go for F&D's own F680 set which, at the time of writing this was selling for ₹2820 on Flipkart. Don't go by the 5000W pmpo rating, the F680 beats the A511 by a good 20W RMS, and gives it a sound-thrashing when it comes to aural quality as well.

Siddharth Parwatay

Trend Micro Titanium Internet Security

Good performer

Price
₹849

Trend Micro's TiS suite is an interesting mix of excellent performance and a confused UI. The detection rate for this month's malware sample was 47% vs. Avast's 42%, which is excellent and on par with the best suites. The parental controls are also exceptional, providing complete control over internet and app access. The only downside to the suite is the UI, which is just a little bit confusing compared to say, Avast. What you get for your money is a good AV engine and excellent parental controls. Nothing more.

Genius Wireless combo

A decent budget combo

Price
₹1,040

The Genius wireless combo is not a bad wireless combo for people on a budget. The keyboard does feel a bit cramped and the keys a bit stiff and there is no palm rest and there are no decent caps lock, num lock or scroll lock indicators. That said, it's a decent keyboard at the price; it's rudimentary, but it works. The rubber strips at the bottom keep it quite stable on a table and the mouse, despite feeling a bit flimsy, works and tracks very well. Overall, this combo doesn't do much to set itself apart from any other option you might find, but if you do come across the combo, it's not a bad deal at all.
