NVIDIA GTX 760

Decent performance, but wait for more GTX 760 flavours

It looks like NVIDIA is leaving no stone unturned to showcase its graphics prowess. We have seen three GTX 700 series cards in the last two months. The latest card to join the family is the GeForce GTX 760 which houses 1152 CUDA cores and will most likely address the more mainstream crowd who find the GTX 770 and 780 beyond their budget. The GTX 760 is based on the GK104 GPU and will come in the 2GB and 4GB memory configurations. For our review we got the 2GB model. This card will likely replace the GTX 660Ti from previous generation.

Price
₹19,499

In terms of looks, it has a black-coloured plastic mesh with the GTX branding in fluorescent green on top. It has the same four display ports seen on the 770 and 780, but it comes with two 6-pin power ports.

We tested the card on our standard rig comprising an Intel Core i7-3960X, 8GB of Kingston HyperX DDR3 RAM and a stock Asetek cooler. Synthetic benchmark scores: 3D Mark 11 Extreme: 2748; Unigine Heaven 3.0 at 1080p max settings: 40FPS; Dirt 3 (1920x1080p max / 2560x1440p max): 87 / 56 FPS; Metro Last Light (1920x1080p max): 24 FPS; Sniper Elite V (1080p max): 29 FPS

We found it to be faster than the ZOTAC GTX 660 AMP Edition but was slower than the ASUS DCII GTX 660Ti card. On the AMD side, the HD 7870 scored past the GTX 760 in some benchmarks and vice versa. The Price point is competitive, but we would wait to see what OEMs have to offer with GTX 760 and how the GTX 660Ti AMP prices get affected as that still is the faster among the two.

Seagate Central 4TB

A central vault for all your data

Price
₹17,700

Seagate Central is a 4TB NAS drive which you can connect to over wired LAN, wirelessly as well as remotely. The setup is very simple, just connect the LAN cable to your router or switch and wait till the Central glows green. You can also backup your local data to the Central drive which shows up on your network. We could access the same video file using five different devices without any lag. There are apps for Android, Apple devices as well as the Kindle tablets and Samsung Smart TV. You can also backup your Facebook photos. Ideal for a home setup. Pricing is on the higher side considering the capacity, but you can go for the 2TB or 3TB versions if you so desire.

Steelseries Flux

If bass is your thing

Price
₹8,705

A remnant of our gaming headset test from earlier this year, the Flux brings with it an impressive roster of features. It has a detachable cable with inline music and mic control. This cable can be plugged into either one of two input jacks provided on each ear cup. Once plugged in, the free jack allows you to daisychain other headphones. They're foldable and seem to be solidly built. In-game positioning is fairly decent for portable cans but music performance takes a beating on account of the overwhelming bass. Overall good headphones but too high an asking price. For that price you can even consider something like the AudioTechnica M50 or the TDK WR 700 wireless sets.
