Google updated its native Drive app for iOS, included support for comments on Docs files and image swipe navigation. Get it here: <http://dgit.in/Zq9qpf>

Vine - Now on Android

Twitter's popular 6 seconds video sharing app for iOS makes its debut on Android with a new zoom feature. <http://dgit.in/14def73>

Agent 001

Point and shoot required

Hi!! Greetings.

I am a big fan of your magazine. I've been reading it continuously for 5 years. I never miss a single issue. You guys are doing a great job.

I like the detailed work and effort made by AGENT 001. Your reviews are unique and suggestions are awesome.

Previously my elder brother wrote to you for your suggestions on some handsets he had selected. He took your advise and bought Galaxy SIII which turned out to be a great deal at that time.

So i wanted your valuable advice regarding the best digital cameras ranging between 4k and 8k. Additionally, I would prefer a 16 MegaPixel camera. I want to use it just for normal family outing and indoor photographs. No professional business with the camera. So list any of the brands which suit the best.

Navpreet Singh

A Hi Navpreet,

Before we suggest a camera, we would like to tell you that Megapixels matter only if you are planning to take large prints of your digital photos. From your requirements, it seems like you are looking at an entry level point and shoot camera. These cameras come with small sensors, and if you pack more and more megapixels on a smaller sensor, it is not going to do your image quality any good.

Since your budget is around Rs. 8000, we would suggest you to go for any of the following three cameras:

- Canon PowerShot A2300 (<http://goo.gl/VoNig>)
- Nikon Coolpix S3200 (<http://goo.gl/xrEKI>)
- Sony Cyber-shot DSC-W710 (<http://goo.gl/uCMOR>)

Nikon Coolpix S3200

Budget GPU needed

My budget for a GPU is 8000-10000. It should include GDDR 5 memory if possible. My PC specs are:

- OS: Microsoft Windows 7 Ultimate 64-bit SP1
- CPU: Intel Core 2 Quad Q8400 @ 2.66GHz
- PSU: Corsair GS600;
- RAM: 4.00GB Dual-Channel DDR3
- Motherboard: Intel Corporation DG41WV
- Monitor: SyncMaster 933 (1360x768@60Hz);
- Intel G41 Express Chipset;
- HDD: 1 TB

I've used Speccy to get the above specs. Please suggest me a good graphics card keeping in mind all the specs. I want to play new high end games like: Crysis 3, Battlefield 3, Assassin Creed 3, Mass Effect 3, as well as upcoming games such as Battlefield 4, Assassin Creed 4, GTA V, etc. Do tell me if my monitor is VGA or DVI and if I need to upgrade it for a new GPU.

And will Nvidia 650 Ti work with my motherboard and monitor? What is the difference between 650Ti Normal, 650Ti BOOST and 650ti AMP edition?

Thanks in Advance.

Connor Cs

A Looking at your system specs, it comes across as an aged system. But your motherboard does have a PCIe x16 slot Gen 1 slot, PCIe is backward compatible, so PCIe 2.0 and 3.0 cards should work fine. We think that the Powercolor Radeon HD 7770 is ideal for your budget as it's selling for Rs. 8000, but you may find a better deal for it too. Your monitor only seems to have a VGA port, unless you are using the 933HD. If you monitor only has a VGA port, look for a card that offers a VGA out. We would suggest that you upgrade your monitor if want to game on full HD resolutions. You may have to keep settings such as AF, AA lower while gaming in full HD mode.

A GTX 650Ti normal has stock settings as suggested by NVIDIA. For instance the base clock speed is 928MHz and it does not have the boost clock functionality (which allows your GPU to scale up the clock speeds based on the workload). The GTX 650Ti BOOST comes with

a base clock as well as a BOOST clock. Finally, the GTX 650Ti AMP Edition cards are those cards which come factory overlocked from GPU manufacturer - ZOTAC. Their base clock speed will be higher than 928 MHz. But the GTX 650Ti AMP edition cards do not have a boost clock feature.

HD-7770

This mouse or that mouse?

I have been using the Logitech Wireless MK270 combo with my Vaio CS17G laptop for the past two years without any problems. I would like to purchase a new mouse to replace the mouse obtained in the combo due to the following reasons:

1. No on/off switch or automatic switch off (Was not present in the mk270 model at the time I bought it);
2. I would like a mouse which fits snugly into the palm.

I am planning to buy a logitech wireless mouse since it has the unifying receiver and I can use my existing keyboard along with it. Currently I have my eye on the Logitech m525 and m310 mice, since their features seem nice and they look like they can fit in my hand correctly. But I could not get a clear picture of their quality and durability from the reviews I read online. Can you give some hints on this?

Also, do you have some other suggestions for a mouse that I can use with my Vaio CS17G laptop?

Edwin Chirayath

A The Logitech M310 is a nice value for money mouse to buy for using it with your Sony Vaio CS17G laptop. Since this is one of Logitech's mid range wireless mice, the quality you'll get is mediocre but okay for regular use. You can also consider looking at the costlier but better Microsoft Mobile 4000 Wireless BlueTrack Mouse. d
