HELP !! Multiple OS installation !!!

Hi,
I bought the G6 2313ax yesterday. I have a couple of problems.
1. DOS was pre-installed which is using FAT32(still there). so without removing it I installed Windows 7. I was able to create only 3 drive partitions.
2. Now from the remaining unpartitioned space, I created a new drive (NTFS) using disk management ,but while doing so the drive partition changed my HDD from Basic to dynamic. I deleted the partitions n also windows 7 files.
3. Some how I managed to install win 7 again. The problem is I am unable to remove DOS and my C drive is shown as dynamic. Also I am unable to partition the unpartitioned space,Here is a screenshot. disk management.png

I want to:
1. Completely remove DOS n completely format the whole HDD(including win 7).
2. I want to install XP,Win 7, Ubuntu by physical partition.
So guys please guide me through this.

Re: HELP !! Multiple OS installation !!!

you will have to delete all the partitions somehow. Only then it will work.

Re: HELP !! Multiple OS installation !!!

1, 2. There can be a maximum of 4 primary partitions in a basic disk whereas such a restriction does not exist in a dynamic disk.. Thereby, you were allowed to create only 3 partitions(1 partition was already there)

Now, your options are -
1. Boot up your Windows 7 setup DVD, and in the drive partition page, select advanced options and then delete all the partitions shown.
2. If the above does not work, you might need to use a partition software which provides with a boot disc(something like parted magic). Just delete all the partitions from there. Or select - Create new partition table.

After that install Windows Xp, followed by Windows 7 and then finally Ubuntu. By the time Windows 7 is installed, you might see, there are already 3 partitions. Thus, while installing Ubuntu, create an extended partition instead of primary partition and create a partition inside the extended space and install Ubuntu into it. After that, you may create as many partitions inside the extended partition as you want.

After silence, that which comes nearest to expressing the inexpressible is music.

Re: HELP !! Multiple OS installation !!!

Use easeus partition manager to convert from dynamic to basic without loosing any data.
Then remove the dos partiton you have.

Re: HELP !! Multiple OS installation !!!

Thanks a lot. I used parted magic from a pen drive and successfully deleted all the partitions. But after that still my drive was dynamic (GPT). I converted my HDD to MBR using command prompt from boot method.
When I inserted the XP cd and tried to install, at the point of (Setup is now starting windows, i got BSOD multiple times). I have now successfully installed Windows 7 (only 4 partitions,rest unallocated-431 GB free).

Thanks everyone, for helping me out. 😊
I just want to know how to partition the remaining unallocated space and install Ubuntu along with win 7.
PS: I have decided not to install XP.
