Digit's COMPUTEX Adventure

We were at this year's Computex in Taiwan and came away impressed with the technology on display.

Jayesh Shinde,
Nimish Sawant
readersletters@thinkdigit.com

Every year in the month of June, the city of Taipei becomes the focal point for the world of technology as it unveils Computex, Asia's (and one of the world's) largest technology convention. Not wanting to be left behind in the race to cover the latest chapter of Computex, Digit went and covered the event to give you (our readers) a first-hand report of what innovative products are going to launch in the market very soon. Unlike other global tech conventions, the computer components get more prominence here.

ASUS

The Taiwanese manufacturer harped a new tune at this year's Computex. *In search of incredible* was their new mantra and ASUS left no stone unturned in delivering a whole host of products, possibly the largest set of new products revealed by an OEM at Computex this year. The press conference hosted by ASUS Chairman Jonney Shih was quite an entertaining one, punctuated by several products announced—covering tablets, smartphones, laptops, routers, mice, and others. It was a mix of revealing brand new product lines for the very first time to the world and refreshing aging champions of the past. “We seek to perfect the balance between

engineering and humanity, where every intricate detail echoes our needs for both emotion and function,” said Jonney Shih. “This is the ASUS way of Design Thinking, where every idea starts with people and we turn our imagination into myriad revolutionary innovations,” he added. Let's see what ASUS has been cooking up all this while.

ASUS Transformer Pad Infinity

Be Free Block Party

We came across an interesting accessory which has also

won the Computex d&i 2013 award given to innovative products. The Be Free Block Party is a collection

of plastic rectangular blocks which can be arranged in various configurations to hold your tablet or your smartphone in vertical or horizontal orientation – at an angle that you like. It has soft rubber tips around the edges which come in contact with the smartphone or tablet part so as to protect the device from scratches. Its retail price is USD 50 but there were no details on India availability. Video: dgt.in/dgt_cmptx_bfbp
