

CPU-Z for Android

Beta version of CPU-Z is available for Android phones. Reports information about SoC, system, battery and sensors <http://dgit.in/194xDb1>

Faster Wi-Fi is coming..

Upcoming Wi-Fi '802.11ac' technology will offer speeds up to 1.3Gb/s. 19 routers, accesspoints, microchips and smartphones signed.

ASUS Transformer Pad Infinity

Adding to its tablet/netbook hybrid series, ASUS showcased the Transformer Pad Infinity at Computex 2013, with the company claiming the device to be the world's first Tegra 4 Transformer. While we can't verify that claim, we can definitely say the product packs a performance punch despite its diminutive form factor. The 10-inch IPS display of the device has a whopping 2560x1600 pixel resolution. Its CPU is clocked at 1.9 GHz. The tablet also has a 72-core GeForce GPU and 2GB of RAM. The tablet also has the ability to output 4K videos via the HDMI out. The Transformer Pad Infinity shows off a 5MP rear camera and a 1.2MP front facing camera. It also supports USB 3.0 and an SD card slot. It has 32GB built-in storage. With the Transformer Pad Infinity, ASUS wants to "transform your expectations for tablets."

ASUS Transformer Book Trio

This is possibly the most innovative and interesting product that ASUS unveiled at Computex 2013. The device is a hybrid i.e., it is a tablet that can be docked into a docking station and can be used as a small but powerful notebook. That's not all, as the Transformer Book Trio runs on Android as well as Windows – simultaneously. No kidding. There is a physical button on

the Trio's keyboard dock that allows you to switch between the two OSes on-the-fly – check out this short video to see how it all works <http://dgit.in/11TVMaN>. It must however be noted that the tablet will only run Windows 8 when it is docked into the keyboard. The Android version running on the Transformer Book Trio is Jelly Bean. The device has a 11.6-inch display with a 1920x1080 pixel resolution. For the two OSes, the device has two dedicated processors as well. The Windows 8 side of the Trio runs on a fourth-generation Intel Core i7-4500U processor whereas the 2GHz Intel Atom Z2580 processor powers the Android screen. The keyboard dock houses a 1TB HDD and the tablet houses 64GB flash storage. This innovative device will be available from Q3 2013, and aims to "transform your expectations for notebooks."

ASUS Fonepad Note, MemoPad HD

The Fonepad Note has a 6-inch IPS+ display with a full HD 1920x1080 pixel resolution, and a dual-core Atom Z2560 1.6GHz processor along with 2GB of RAM. Taking on the Samsung Galaxy Note series of devices, the Fonepad Note comes with a stylus, which can be used for handwriting notes, freehand sketching and more features. The phablet also has the ability to house a SIM card slot for data as well as voice calling. It houses an 8MP rear camera and a 1.2MP front facing camera.

Asus has added two new devices to the Memo Pad family – the MemoPad HD 7 and the MemoPad FHD 10. The MemoPad HD 7 has a 7-inch display with

AGAIT ECLEAN EC03

We stopped by AGAiT's booth to get a quick glimpse of an interesting new device: The Eclean EC03, a robotic vacuum cleaner with built-in mobile surveillance features. Weighing only 2.7 kg and with a slightly larger diameter than a full-sized soccer ball, the AGAiT EC03 robotic cleaner quietly goes about dusting your floor in an efficient manner – without any human intervention. It has 0.2 litre dust bag fitted inside which is easy to clean and sports a patented collision detection system which prevents it from bumping into objects from a safe distance or falling off raised platforms. Equipped with a 2500 mAh rechargeable Li-polymer battery, the AGAiT EC03 robotic cleaner can be in action for about 90 minutes in its cleaning mode. It operates at 55dB, which is quieter than a washing machine. Also, AGAiT EC03 claims to be equipped with an HD wide-angle lens for intrusion detection. That's right, the robotic vacuum cleaner also has a built-in surveillance system which can take photos or record video (at a set interval) and send you alerts on your smartphone or tablet if it records any untoward activity within your house.

a 1280x800 resolution. The rear of the tablet has a 5MP camera and the front has a 1.2MP camera. The tablet also boasts of SonicMaster audio. Under the hood, the tablet is powered by an ARM Cortex A7 quad-core CPU. Out of the box, the tablet runs on Android 4.0 which is the older generation Android OS but Asus says that the device will receive an update. In terms of its pricing, the tablet will cost \$149 (₹8,500 approx.) for the 16GB variant and \$129 (₹7,300 approx.) for 8GB variant. Take a look at its image slideshow: <http://dgit.in/11GBd2s>

If we list out and talk about all the products ASUS showcased at Computex 2013, we will need a lot more pages. But of course you can read all about them in greater detail on our website, by visiting this link: <http://dgit.in/171hfDV>

Acer

Besides updating their existing Ultra-book product lines at Computex 2013, and launching a Liquid

S1 phablet, Acer introduced two quite interesting products at this year's show – the Iconia W3 and Aspire R7.

Acer Iconia W3

The Acer Iconia W3 is being hailed as the world's first 8-inch Windows 8 tablet, and it comes with a full-sized keyboard as well. Taking on the likes of the iPad mini and the Samsung Galaxy Note 510, the Acer Iconia W3 weighs just over one pound and measures 0.5-inches in thickness. The 8-inch display of the tablet has a 1280x800 pixel resolution and it claims to deliver up to 8 hours of uptime on a single charge. In terms of its connectivity options, the tablet has Wi-Fi, Bluetooth 4.0, HDMI Out and microUSB. It also
