21.5-inch tablet!

HP announced a 21.5-inch tablet named Slate 21 AIO which is powered by NVIDIA Tegra 4 processor and runs Android 4.2.2.

and so on, but the new thing we saw this time was the OC Panel. It is a separate console, which allows you to monitor and over-clock your system with all the relevant details presented on a digital display. The next most exciting board was the first ROG mini-ITX form factor board – the Maximus VI Hero. So those looking at building a compact but powerful system, it looks like ASUS has a solution.

Gigabyte

Gigabyte G1 Sniper 5 is one board we are eagerly looking forward. Coming in to green and black colour tones, the Sniper 5 belongs to the Killer series targetted at gamers. The board has actively cooled heat-sinks, 4-way GPU support, isolated on-board Creative Sound Core3D audio processor and so on. The board also allows you to change your onboard operational amplifiers to fit

one according to your audio preferences. The other board which had us drooling was the Z87X-OC Force which comes in orange and black colour tones, active cooling on both heat sinks, a boatload of onboard buttons for overclocking and other functions.

ASRock

ASRock had two seriously interesting boards just at the entrance of its booth. The ASRock Z87 Extreme11/ac had a whopping 22 SSDs running off its six SATA 6Gbps and 16 SAS3 ports. The other board was the ASRock Z87 OC Formula/ac which was coated with a waterproof, 'Conformal coating' and had a constant stream of water flowing over it while it was up and running! While the former is a bit of an overkill for consumers, the latter seems more up our alley. Needless to say, we are just waiting with

E-BOOKS EXTRAVAGANZA

In India when it comes to e-book readers, we most likely think about Kindle and some local brands – which are nothing more than rip-offs of Kindle models. Either ways, the form factor is always 6-inches and over. But at Computex, we came across one brand which had e-book readers across various form factors going from 5-inches all the way to 10-inches. Gajah International is a non-retail manufacturer of e-books and had around 10 to 15 e-book readers on display. They also had e-ink phone covers which allowed users to push their pictures or data cards on the e-ink cover.

This installation was made up using Gajah's e-book readers

a whole bunch of fluids to try out ASRock's claims. But apart from the innovative coating, the Z87 OC Formula/ac comes with all the bells and whistles for overclockers. But the interesting part is the presence of an OLED status indicator on the board in place of the two/three digit POST code LEDs. And of course, the Fatal1ty stamp is

ASRock Z87 OC Formula

Drool-worthy cabinet mods

Walking around the Computex floor, we came across some seriously wonderful cabinet mods. A lot of the cabinet companies had cabinet modding competitions whose winners were displayed on the floor. Go ahead, get inspired and make your own mods!
