

The next step..

Microsoft is reportedly going to bring XBOX games to iOS and Android platform with Age of Empires series debuting first

Sony SmartWatch 2

Sony unveiled SmartWatch 2 - a water resistant watch allowing users to answer calls, read email and text messages, etc. for Android phones

Booth-babes galore!

What's Computex without some eye candy of the non-tech kind :-)

POWERBYPROXI WIRELESS CHARGER

There were more than a couple of booths dedicated to promote wireless charging. We visited one booth which had representatives from the Wireless Power Consortium(WPC) demonstrating the evolution of the Qi wireless charging technology. PowerbyProxi is one company which had a wireless charging product on display. It was basically a flat rectangular piece of plastic which had the ability to charge one or many devices at the same time. So while the Qi specification 1.- and 1.1 is capable of charging one phone at a time, PowerbyProxi had developed a charging pad which allowed you to charge multiple phones or mobile devices at a time. Thanks to the thin charging circuitry, the receiver of this pad is located in the back cover of the phones. Video: dgit.in/dgt_cmptx_pwrbyprx

present on the Fatal1ty Z87 Professional board. Don't forget to check out his interview in the DVD.

MSI

MSI had two colour themes – yellow for the boards targetted at over-clockers and red for the gamers. The MSI Z87 XPower Max represents the flagship Z87 OC board and it looks the part with a huge heat sink, buttons for overclocking, voltage probe points, a newly designed UEFI BIOS, an isolated audio processing component on the board, built-in Intel WiDi, Bluetooth and Wi-fi and so on. The gaming series board has the Z87-GD65 on the forefront, with its red and black design. It has an

MSI Z87 MPower Max

illuminated audio chipset, intricately designed PCH heatsink, it supports only three-way GPU setup, OC Genie, voltage probe points and more.

And guess what? When we returned to office after a week of drooling over these boards in Taipei, some of them had already reached our Test Centre. Stay tuned for their reviews next month. **d**
