We take a look at the biggest happenings on the web since we last met, from new services being launched, to product refreshes and updates.

Amazon Marketplace India

Global e-commerce giant Amazon has brought its online shopping portal to India – Amazon.in. To start with, the service offered books, movies and TV shows for sale, and at the time of writing this started with gadgets as well. On Amazon.in, Indians will be allowed to act as third-party sellers on the marketplace. The third-party seller will be able to list their products for sale on the website.

“This marketplace will provide Indian customers with a shopping destination to purchase products from third-party sellers. India represents Amazon’s tenth marketplace launch. With the introduction of the Amazon.in marketplace and launch of two new programmes – ‘Sell on Amazon’ and ‘Fulfilment by Amazon’

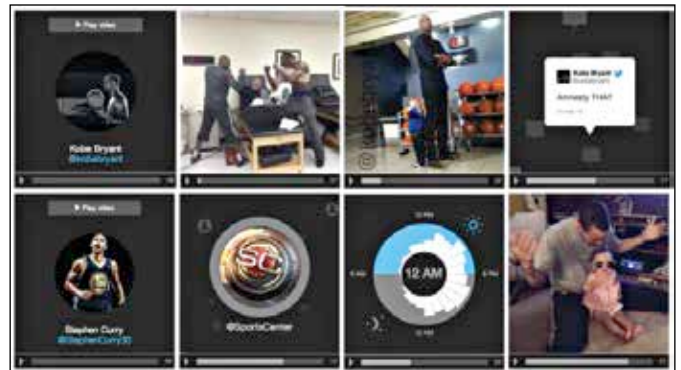

time. After the offer expires, orders above Rs. 500 will be home delivered.

In the past, we have seen the launch of Jungle.com, which was Amazon’s debut in the Indian market. Amazon also has its Kindle store along with Kindle digital publications in India. The Amazon Android appstore too is live in India.

New Gmail Inbox

Google has revamped Gmail for desktop and mobile, redesigning the inbox to sort items into groups. The new inbox groups are meant to help users better manage their disparate incoming mail, putting them “back in control using simple, easy organization.”

The changes to Gmail’s Inbox have mostly rolled out at the time of writing, though users on the desktop will be able to manually choose the

Twitter FollowMe - Kobe Bryant

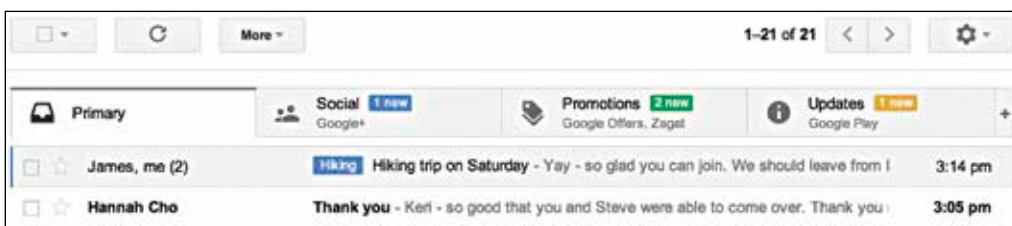

tions (and offers), Updates (and bills and receipts), and Forums. Users will be able to disable and enable these tabs from the Configure inbox option. They will also be able to set all starred messages to appear in the primary inbox, and ensure certain senders appear in certain tabs.

The tabbed Gmail inbox also appears in the Android and iOS apps. Your settings on the desktop version get reflected on

highlight reels, including their finest tweets, pics and Vine clips. Twitter has teamed up with Vizify to launch #FollowMe reels, which are said to be based on HTML5.

“We’ve teamed up with Vizify to bring you #FollowMe, a new way for everyone on Twitter to make instant highlight videos of their best photos, Vine videos, Tweets, topics and followers. You’ll find out if you’re a nightowl or an early bird, discover your most engaged followers, and feature your most popular Tweets. All set to music,” Twitter announces in a post.

Twitter has already posted some examples of #FollowMe clips, featuring NBA stars Kobe Bryant and Steven Curry, as well as star of the TV show Glee, Amber Riley. To get started with Twitter’s #FollowMe, you need to log in to Vizify, which will ask you to authorize Vizify to access your Twitter account. Once Vizify has made your video, you can change the music or choose different elements (photos, Vine videos, Tweets).

New Gmail inbox now features tabs

— sellers across India now have access to unlimited and free ‘virtual shelf space’ and a scalable, pay-as-you-go fulfilment and customer service offerings,” the company said in a statement.

As an initial offer, customers will get free home delivery and cash on delivery for a limited

new design (selecting ‘Configure inbox’ in Settings), soon. The new version will be just another inbox type, like Classic or Priority Inbox, and users will be able to switch whenever they want.

The new Gmail inbox for desktop will feature tabs, five in total – Primary, Social, Promo-

the mobile version. Be sure to check out our Tips and Tricks section for some brilliant usability tweaks.

Twitter's FollowMe Service

Twitter has introduced a new feature called #FollowMe that allows users to create short
