Twitter and Evernote have now implemented two-step authentication and other updates on security

Facebook Finally Adds Hashtags Support

Now, you can use hashtags on Facebook as well! The social networking giant has finally brought the popular conversation style to its network, allowing users to create and click on hashtags that their friends have been posting.

Announcing the roll-out of the new feature, Facebook's Greg Lindley says in a post: "Starting today, hashtags will be clickable on Facebook. Similar to other services like Instagram, Twitter, Tumblr, or Pinterest, hashtags on Facebook allow you to add context to a post or indicate that it is part of a larger discussion. When you click on a hashtag in Facebook, you'll see a feed of what other people and Pages are saying about that event or topic."

Facebook users can now search for a particular hashtag from the search bar, click on hashtags originate on other services, such as Instagram and most importantly create posts directly from the hashtags feed and search results. Facebook also allows users to control the audience for their posts, including those with hashtags.

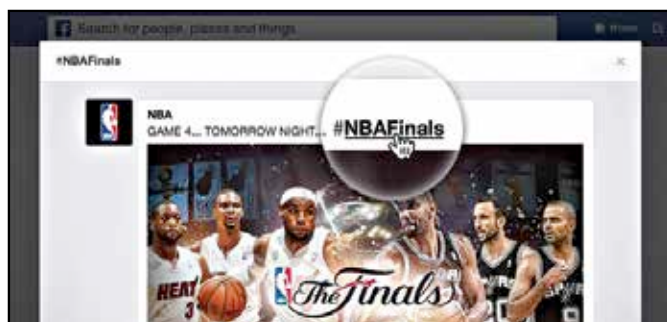

Adobe Creative Cloud Service Launched in India

Adobe announced the availability of Adobe Creative

Cloud service in India less than 24 hours after the global launch. Adobe Creative Cloud is bringing a one-stop solution for creating, editing and producing all kinds of content to everyone who may need it. The Creative Cloud approach by Adobe is one that allows users to indulge their artistic side on a variety of devices, be it a PC, Mac or a mobile device and yet have the works available across all platforms thanks to the cloud integration.

Creative Cloud includes the next generation of 15 Adobe desktop applications – including Adobe Photoshop CC, InDesign CC, Illustrator CC, Dreamweaver CC, Premiere Pro CC and more. Adobe Creative Cloud includes more than 30 tools and services that enable professional-grade content creation and delivery across print, web, mobile apps, video and photography.

Adobe Creative Cloud is a subscription based service that allows you access to the entire Adobe Master Collection for ₹2,700/month (annual commitment) or ₹1,600/month for those who already own software in the CS3-CS5.5 range. If you need access to only a single app, it will only cost you ₹1,000/month and if you're a student or a teacher, you can have the entire Adobe collection at your disposal for

Facebook has finally jumped on the #Hashtag bandwagon

Adobe Creative Cloud released for Indian users

LinkedIn updates now feature rich media

just ₹1,000/month. This was part of an offer only for users signed up for before June 25. Now the same will cost you ₹1,600/month.

LinkedIn Status Update Rich Media Sharing

Professional networking site LinkedIn looks to be more serious about having multimedia content on their network. It recently added photo and rich media sharing support to user profiles. And now the network has rolled out the similar functionality for its status updates posted from the homepage. With the latest update, LinkedIn users can now directly share images, documents, presentations and

other types of media content from the status update bar – something very common on Facebook and Google+.

"Whether it's a thought provoking presentation about the future of big data or it's a picture of an inspirational quote, or perhaps it's an infographic showing the top trends impacting your industry, the possibilities are endless for what you can share on LinkedIn to add a richer and more visual component to your professional discussions," says LinkedIn in a post.

The update is available for LinkedIn's Company Pages as well. LinkedIn plans to roll out the update to its mobile apps as well; though it is a desktop-only feature initially.
