

GRID on OUYA

Nvidia demoed the OUYA game console at E3 by streaming GRID on it thus proving its hardware prowess <http://dgit.in/OUYAv>

R.I.P. Xbox One!

Is Xbox One a failed product? Have a look at the head-to-head comparison of PS4 and Xbox One <http://dgit.in/10ptBpT>

Feature

Hulu may be coming to India soon...

tion for users outside the US. Rumor has it that NetFlix & Hulu will soon find their way to Indian markets. But until that rumour turns into reality, Hulu and Netflix can still be accessed with a simple VPN setup on any of your device. Virtual Private Network provider like Hot Spot Shield connects you to local servers in the US for free, allowing you to unblock these services. Thus, you can watch that Game of Thrones episode on your PC at work, and put out the spoilers before anyone else in India does.

Entertainment on-the-go

When it comes to providing options for entertainment on-the-go, Android and iOS lead the pack. Both platforms offer a variety of options for mobile entertainment. Google with its recent launch of Google Play Movies and Apple with its iTunes Movies India offering provide fantastic entertainment options for your smartphones and tablets.

iTunes Movies

<http://www.apple.com/in/itunes/what-is/> Apple's iTunes Movies India is another great option for movie junkies. iTunes gives you the option of renting and purchasing movies. With movies across various genres, iTunes gives you the choice of SD and HD quality print depending upon the availability. Unlike BIGFlix, iTunes comes with an offline feature that lets you watch your movie post download, even when you're offline.

Google Play Movies

<http://dgit.in/132cyuh>

Android fans need not be disappointed as Google Play now allows you to rent and purchase movies, right on your smartphone and your tablet. Largely dominated

by Hollywood flicks (with a handful of Bollywood picks), Google Play Movies offers to rent and buy movies in SD as well as HD. The best part about Google Play movies is that it offers offline mode feature, which lets you watch your movie offline post the download. The Google Play Movie also gives you the option to resume watching the movie exactly from the point you last left it at.

Websites

While we get that you're not ready to abandon your TV set just yet, cutting the cable cord would surely not hurt as much. If you're looking at watching your favourite international shows online without paying a dime and without waiting for it to download, we have a few options for you. Websites like Sidereel.com, Tubeplus.me, Crackle.com and Btvguide.com let you track and watch your favourite TV shows. While most people may argue that these websites are illegal, websites like Sidereel, Tubeplus.me, Crackle, Btvguide.com come with a Digital Millennium Copyright Act Disclaimer (DMCA). According to the DMCA disclaimer, these websites provide legal copyright owners with the ability to self-publish on the Internet by uploading, displaying & storing various types of media. Simply put, the DMCA disclaimer helps enforce copyrights for digital media content.

Mobile Remote Controls

There's more to your smartphone than just making calls and staying connected. Thanks to the advent of applications, most smartphones today can be used as remote controls. So we tried, tested, flipped uncountable channels and

Google Play store has movies now

discovered some of the best apps out there that turn your smartphones into universal remote controls. These apps let you control your PC, streaming boxes and certain TVs too, as you lean back and enjoy watching your TV show, movie without having to look for multiple remote controls.

YouTube Remote

Available: Android

Available for free on Android, YouTube Remote turns your mobile phone into a touch-screen remote control. To activate your YouTube remote, all you need to do is sign up/ login to your YouTube account. The YouTube Remote app then links your device to the YouTube Leanback, a version aimed for television & other large viewing, and lets you control your YouTube account on your PC screen, tablet right from your phone. The app also lets you build playlists, and gives you the option of compact video viewing, right on the phone! For Android users, we also recommend the Gmote app for a seamless video viewing experience on your PCs.

Peel

Available: Select Android devices & iOS.

Another remote control app that's absolutely fantastic is Peel. It not only turns your device into a remote control, but also recommends TV shows you could watch based on your preferences and also on what's popular or trending. The only drawback of Peel, however, would be that it's Android availability is limited to only a certain set of Android (largely Samsung) devices.

Agreed that it will be unimaginable and frightful to let go of your cable connection, let alone your TV set. But would you still frequent the movie theatre to catch Bollywood flicks after discovering BIGFlix? Would you bother switching on your TV for news when you can access the news on YouTube LIVE on your tablet? Would you still want to continue paying for your DTH cable services for channels that you don't even watch? In our heads, it's a resounding 'yes' to cutting the cable cord and just a matter of time before we all ditch that idiot box. All set?
