

Get smarter

Who doesn't like to be smarter, right? With the power of these apps, it's time to give your brain a much-needed upgrade. Thank us later.

Nokia Asha 501

This month Nokia unveiled its latest Asha 501, with a global price tag of \$99. <http://dgit.in/12rE2a3>

Combimouse

How would you work if your keyboard and mouse were designed differently from their traditional look and feel? And what if they made you work better than ever? The genius of Ari Zagnoev, the engineer who invented and patented Combimouse as far back in 1999, has been perfecting the design and concept.

The Combimouse basically splits the regular keyboard into two halves and the right-half of the keyboard has a mouse trail towards the end for you to grip. It's still a work-in-progress, the Combimouse, but Zagnoev and his team are getting closer to launching a commercial product very soon.

Digital gizmos that add on the convenience

Cube 3D Printer

3D printers are still at a nascent stage right now, and most of them require a complex assembly process before you can fire them up. Not the Cube 3D printer, from 3D Systems and Cubify, which is a bit different from others out there. The Cube is literally its name-sake in dimensions (5.5 x 5.5 x 5.5 inches) and comes with an EZ load print cartridge for "printing" miniature objects. After you purchase it, you get up to 50 free 3D print files for the initial burst of 3D mania. You can design and sell your 3D model online and purchase prototype designs from others through Cubify. Let the 3D hysteria begin!
