

freedom to manually select activities to plan, re-plan, add, rearrange, and delete activities until the customer arrives at his or her perfect vacation travel plan.

Mobile Vacation Planner (MVP) is designed to be highly interactive and travel content-rich. MVP includes features for seasonal, context & time-sensitive, geo-location-based, pre- and intra-trip planning and post-trip sharing, and offers APIs to integrate with Google Maps & Places, TripAdvisor, Bing Attractions, a Travel Planning Calendar, including export to Apple iCal. MVP also offers Travel Booking Engine & Commerce Integration, as well as the capability to integrate third party travel content sources. MVP also includes the capability to upload trip details to Social Media, like Facebook, Twitter, and Instagram, and the facility to use the app both online and offline, has enhanced user experience, flexibility, and ease of use.

Private labelling of MVP is available to companies seeking to engage and add more value to the consumer in their experiential travel planning, including tour operators, traditional & online travel agencies, youth and adult travel management companies, hotels, casinos & resorts, vacation clubs, event management companies, and convention & visitors bureaus. The business benefits of Mobile Vacation Planner (MVP) include powerful consumer bonding with your brand and increased customer loyalty, increased long-term revenues, increased travel agent productivity by offloading some of the travel planning activity to the consumer, and reduced computing infrastructure costs by leveraging both open source technologies and cloud computing-based hosting services.

Blue Star Infotech also offers other traveller value-added mobile apps including two for mapping routes to destination locations and providing turn-by-turn directions, one at street level (iRoadGenie) and the other inside large facilities for large resorts, convention centers, casinos and other venues with navigational challenges (iMapGenie). The company has also developed mobile native and web apps for booking air, car and hotel services, travel itinerary management, and weather and flight delay information.

The new age of mobile travel apps that increase traveller productivity, enhance their travel and user experiences, and help plan and realize their dream vacations is upon us, and the forecast looks bright! >
