

Saving Images

Opera lets you save images with extreme ease. Just press [CTRL]+left-click on the image and Voila! But wait, what if it's an image link? We know that [CTRL]+left-click opens a link in a new tab. So how do you save your image then? No problem, Just press [CTRL]+[ALT]+left-click [CTRL]+[ALT]+left-click for an image link. The image will then be saved.

Zooming in

Opera makes zooming into your favourite articles online extremely convenient. Just press the '+' and '-' keys on your numpad, to zoom in and zoom out respectively. Pressing '*' will snap the page back to a 100%.

Easy Keyboard Browsing

Not really a big fan of the mouse? Prefer to work primarily with the keyboard unless forced to? Well, Opera makes working on a keyboard really easy. -> [SHIFT]+arrow keys enable you to hop from one link to another. -> [ENTER] activates the link, and [SHIFT] + [ENTER] opens the link in a new tab. If you want the link to open in the background, not covering your current tab - press [CTRL]+[SHIFT]+[ENTER] -> [F8] focuses the address field.

Tabs

Opera was also the first to introduce tabbed browsing, and its tabbed browsing experience is a lot more advanced. For instance, Opera remembers how you browsed, and thus how you created your tabs. Therefore, if you close a tab, it goes to the last active tab. If this is slightly confusing for you however, you can go to menu bar>preferences>advanced>tabs>when closing

a tab and change it from activate last active tab to activate next tab. Opera is also jam packed with a bunch of really cool tab features.

Stacking tabs

When you're working with a large number of tabs, you can stack the sites that are similar together, by just dragging one tab onto the other until it turns gray, and then releasing it. Thus, stacking can help really reduce the clutter on your tab bar.

Pin tabs

This is a really cool feature that lets you pin a tab onto the tab bar making them a

links you've clicked from the original tab will be opened. This streamlines the process, not requiring you to open and close a lot of tabs. Just do not be alarmed if you forget about the follower tab and start to wonder why your links aren't opening.

Speed dial

Another revolutionary feature that Opera brought in is Speed dial. It is a customisable homepage that has thumbnails of your sites in a grid view, for easy access. To enable Speed dial, go to menu bar > preferences > general > startup > start with speed dial. On the speed dial page, right

Increase number of columns

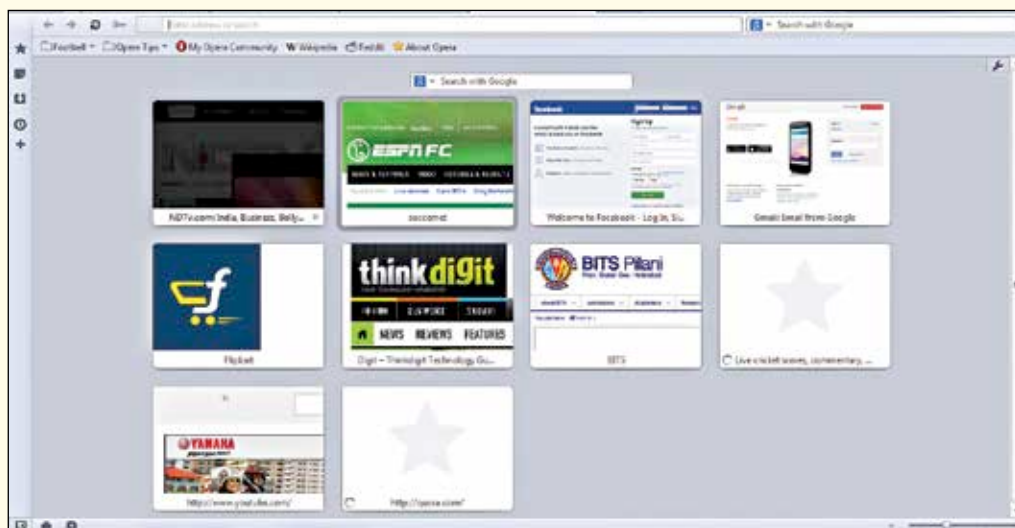

The browser only lets you set a maximum of 7 columns manually. To increase this, go to configure speed dial and just change the number of columns to automatic, zoom to manual, and then decrease the zoom till you find the grid view to your liking.

Hide Speed dial

If you are concerned about your privacy, hide speed dial by following these steps:

- Enter opera:config in the address bar to open the preferences editor.
- In the search bar type Speed dial

The Speed dial page on Opera

permanent feature. Very useful for the sites that you visit often. Just right-click on the tab and then click on pin tab.

Follower tabs

Follower tools is another useful tool that can come in handy especially when you want to check out multiple links on a webpage, but still want to continue reading the original page. By right clicking on the tab and then pressing create follower tab, Opera creates a follower tab for this particular site in which all the

click > Add new dial to get new speed dial entries. And right click > configure speed dial > number of columns to choose how you want your grid view. An interesting feature of speed dial is that it can reload speed dial entries at particular intervals of your choice. This is extremely helpful to check updates on a site, before you actually go ahead and open it. To do this, rightclick on the particular speed dial entry and then go to reload every, and select your required duration.

- In the results that pop up, change Speed dial state from 1 to 3.

Alternatively, you can just enter opera:config#UserPrefs|SpeedDialState in the address bar, and change Speed dial state from 1 to 3.

Apart from the above, there are some other cool features that Opera offers which you can capitalise on to optimise your browsing experience.

Opera Turbo

One of the most prominent features of Opera, which
