

attracted a bunch of users to it, is the Turbo mode feature. This feature enables server-side compression of the images and other graphic content on your page, before sending it to your browser. Thus, reducing the amount of data sent, and hence a much fast load time. This is ideal for users with slow net speeds, or people with limited data usage packs. To enable this feature, go to quick preferences [F12] > Enable Opera Turbo (check the box). You can also let it detect whether or not Turbo mode is required based on your internet connection. After enabling Turbo mode, left click on the icon on the bottom left corner and then click on configure Opera Turbo, and check Automatic on the pop up window that appears.

Taking Notes with Opera

If research on the internet is a vital part of your job, or you just love gathering information online, Opera notes is the tool for you. You can open a note by either pressing menu bar>notes or tool>notes. To add a new note of your own, just click add>new note in the notes tab. To save information from a webpage, just highlight

text and right click>copy to note. Saved notes can also be sent by mail when you're done.

Assigning nicknames to bookmarks

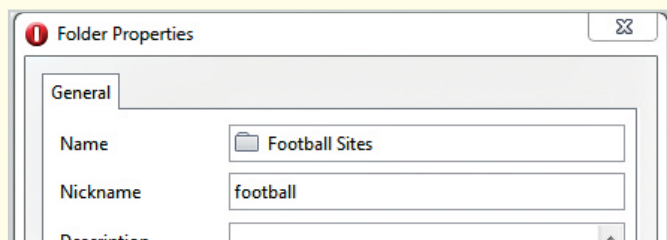

Opera thrives on customization, and nicknames are a really cool way to make you feel at home while browsing. First up, go to menu bar > toolbars > bookmarks bar and make sure it's checked. This will display the bookmarks bar. Now, for any site that you want to bookmark, just drag the tab icon onto the bookmarks bar. Since this site is a bookmark now, rightclick > properties and assign nickname for the given bookmark on the bookmark bar.

Opening a set of bookmarks together with nickname

If the above tip is commonplace, this is the extension that makes it interesting. Opera lets you open a set of sites that you want to open at the same time by just entering the nickname that you assigned for it. For example, by typing 'football' in the search bar, you can open your go-to football sites all at one go. To do this, first bookmark the sites that you want by dragging them onto the bookmarks bar. Then

Opening your favourite pages was never this easier

Assigning nicknames is a great tool for better organisation

go to menu bar > bookmarks > manage bookmarks. In the popup window, on the left pane right-click > new folder and then give it any name you want. Now, drag the set of bookmarks that you want to open at once from the right side and drop it into this folder. Then select this folder rightclick > properties and then assign a new nickname in the popup window. Press okay, and close bookmark manager tab.

Since your bookmarks are already in this folder, you don't need them taking space on your bookmarks bar, and hence can remove them from there by rightclick > remove from toolbar. Now, all you need to do is enter the nickname ('football' in this case) in the address bar, and all the corresponding sites open in adjacent tabs. Brilliant, isn't it?

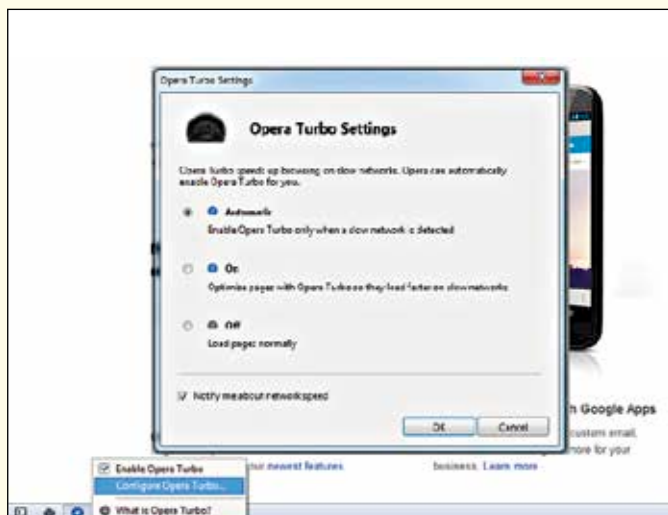

Saving and restoring Sessions

For all those times when you've had to abort a current session mid-way, and desperately needed to get back to it, Opera makes it extremely simple. To save your current session, just go to menu > tabs and windows > sessions > save this session and once you've saved your session, just go to

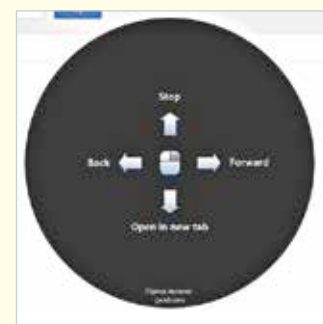

menu > tabs and windows > sessions > manage sessions and then select and open the desired session from the popup window that appears. If your menu bar is already displayed, then for the same actions just go to file > sessions > save this session and file > sessions > manage sessions.

Mouse Gestures

An amazing feature is that of mouse gestures in Opera. To enable/disable mouse gestures, go to settings > preferences > advanced > shortcuts. On enabling it, you can perform a lot of common actions with just small quick mouse movements after keeping right click pressed. For example, moving down and then right, keeping right mouse button clicked, will close the current tab. Just hold the right mouse button for
