

Facebook vs Twitter?

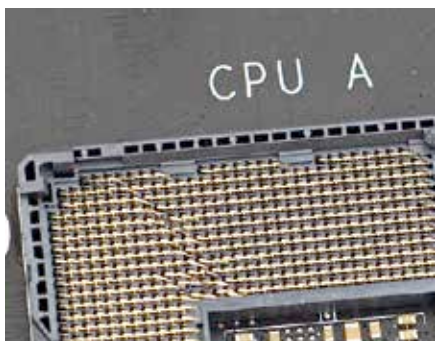

Just hours after Facebook unveiled video support for Instagram, Twitter started promoting Vine on their emails. Looks like a cold war?

YouTube app update

YouTube app has been updated for Android and iOS platform, delivering the video suggestion overlays. Yet to arrive on its mobile site. <http://digit.in/19X7Z7s>

Q&A

Carefully work with a tweezer and a microscope to get the socket pins in the right position

hand, a pin and loads of patience to straighten each one. Also when inserting into the CPU in the motherboard socket, you have to be extremely careful to make sure no pins get bent again or break, or you risk motherboard damage and fire again.

Problem with Bit Comet

I have a laptop with Windows 8 installed on it. My problem occurs when I use 'Bit Comet' for downloading files. After five minutes my laptop suddenly shuts down without a prompt!

This really irritates me. I tried out everything such as updating Windows, installing a fresh copy of Bit Comet but nothing seems to work. Please help me get out of this.

Ritwik Sahay

The problem may be overheating. Also check if there's an option in Bit Comet such as "Shutdown when the download is complete" that has been left on. Else try using uTorrent.

8400GS issue

My system configuration is as follows:

- Processor: Intel Core i3
- OS: Windows 7 Ultimate 32-bit
- Motherboard: Gigabyte H55M-S2H
- GPU: NVIDIA GeForce 8400 GS
- RAM: 2GB

Windows update has recently updated the driver for the NVIDIA card 8400GS. But all I got after updating was a 3D vision pack so I could switch it over to 3D vision. But does this card really support 3D? If yes, then please tell me because I will then be upgrading my monitor to 120

Hz to switch to 3D. Thanks in advance.

Himankan Kashyap, Guwahati

According to the official NVIDIA link here: <http://goo.gl/HVnMu> there is no mention of the NVIDIA 8400GS in the 3D supported cards list. So we believe, you cannot game in 3D using the 8400GS. Even on this page of this card: <http://goo.gl/OXAQ9> there is no mention of 3D Vision support. So we would not advise you to spend your hard-earned money on getting a 120Hz monitor, if your card is not capable of playing.

ReadyBoost.sfcache

There is something called ReadyBoost.sfcache in my pen drive which is about 1.19 GB large and my PC says you can't delete it because it's in use. I think it is something about RAM boost and I don't know how to remove it. I tried formatting my pen drive, searched the whole Control Panel but didn't find anything. If you know how to remove it please let me know. My OS is Windows 8 Pro 32-bit.

Harsh Khurana

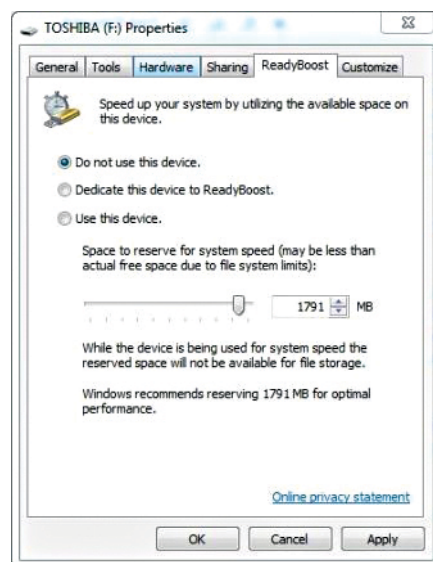

ReadyBoost is a feature which allows you to use part of your USB drive memory as cache memory. This option is supported from Windows Vista onwards. If you had set the flash drive as a ReadyBoost device, then your OS will have automatically reserved and allocated some memory space for the ReadyBoost cache file with the name ReadyBoost.sfcache. If you want to reclaim this space, follow the following steps to disable Ready Boost feature.

Insert the USB drive and in the Windows Explorer right click on the USB drive icon. Go to Properties>ReadyBoost Tab. Of the three radio buttons, select the 'Do not use this device' option. Click Apply and try to see if the space is still used up by the cache component.

Windows Phone queries

1. Can I backup apps in Windows Phone 8 OS? I really want to backup the app packages for keeping them to install again.
2. Is there any working call recording app and blacklisting app available for WP8?
3. Can I use my Nokia 520 as Wi-fi hotspot?

Yashraj Nayak

Disable ReadyBoost

1. For backing up your Apps data and package go to your Apps list > Settings > Backup > App List + Settings. Turn on the Backup. It will back up your apps installed on the phone, your call history, theme colour, your Internet Explorer favourites, accounts setup on your phone and other settings on your phone.
2. Call Recorder (<http://goo.gl/3QXGn>) can allow you to record phone calls. For call blocking this is one app called My Blacklist, but its reviews aren't great so we would not recom-

Call Recorder app UI

- mend it, specially as it is a paid app. You may try Call Guard though (<http://goo.gl/qs2LK>)
3. Yes, you can connect upto 8 devices using the Nokia Lumia 520 as a Wi-fi hotspot (<http://goo.gl/omXxl>)
