

Feature phone app success

Emerging markets such as India and Indonesia helped the Facebook for Every Phone app garner over 100 million active monthly users

Apple gave a refund?

Apple refunded the £4,000 bill raked up by a man's 8-year-old daughter via in-app purchases on his iPad

All's well that's Haswell

The Haswell platform is finally upon us and as always we help you select the best Z87 board for your needs

Intel announced its fourth generation of Core-i series of processors in the first week of June this year. Code-named Haswell, this platform introduces a brand new socket: LGA 1150 which means you will have to buy a new board and processor combo, if you want to get the latest Intel platform. You can still use coolers of your older LGA 115x sockets.

The platform also introduces the Intel Express Z87 chipset which gives you upto six SATA III, 6Gbps ports and six USB 3.0 ports from two each seen on the Ivy Bridge or Z77 platform.

Under 10k

Of the three boards present in this category, the one which stood out was the ASRock Z87 Pro3 thanks to its breadth which was visibly shorter than the other ATX boards. The board came with minimal bells and whistles including a single PCIe 3.0 slot, six upwards facing SATA ports, two USB 3.0 ports on the backpanel I/O and minimal heat sinks around the VRMs. The only justification we can think for the limited breadth is that it's meant for systems that have a small cabinet size.

The Hi-Fi Z87X 3D was the only board we got from Biostar. It comes with three PCIe x16 slots and supports CrossFireX. The

Biostar Hi-Fi Z87X 3D

heatsinks aren't that impressive when compared with the MSI Z87-G43. The two things that we liked about Z87X 3D were the presence of an LED

POST code read-out, dedicated buttons for start and reset and all SATA ports pointing sideways instead of upwards. Considering the other boards lack these features, the Bio-star gets an edge over them.

MSI Z87-G43 comes in a blue and black design. The heatsinks on both
