The Note 510 brings with it a slew of features found on the Samsung Galaxy Note II such as the S Pen and the array of apps that use the style. You also have the ability to run two apps simultaneously on the display. The downside to the tablet is that it is very plasticky in its build and is a fingerprint magnet. The OS is skinned with TouchWiz, which should make any Samsung device user feel right at home.

The display of the tablet is beautiful for consuming multimedia content and playing games as well as running apps. The viewing angles and reproduction of colours on the tablet is very good. The speakers are housed on the bottom panel and not

on the rear, and this is a good thing. The tablet is light and comfortable to hold for prolonged use too.

So, if you are in the market to pick up an 8-inch tablet, you have to decide between the iPad mini and the Galaxy Note 510. The iPad mini is better built, doesn't support voice calling and has a larger apps ecosystem. The Galaxy Note 510 on the other hand has voice calling, a better display, the S Pen shenanigans, expandable storage, multi-window capabilities and the Android OS with access to the Google Play store and Samsung app store. Your choice should be based on which ecosystem you are a part of. Overall, the Note 510 is a great performer but with lacklustre build.

Toshiba Satellite L40-A10110

Good candidate for a basic, stylish home laptop

Toshiba's updated its Satellite series of laptops with a brand new look. No, don't worry, the laptops still sport a clamshell design, but its exterior's a lot more snazzier than before. The Satellite L40 has a brushed silky blue screen lid and palmrest that's pleasing on the eye, and it definitely looks more expensive. Despite its alluring design and curved edges, the Satellite L40 isn't spectacularly built, however – its roomy keyboard deck dips too easily at several spots and so does the palmrest. Its touchpad is too sensitive and difficult to use early on as well.

The 14-inch Satellite L40's battery life lasts for 2 hours 38 minutes in our benchmark test (at high performance mode), which

is quite good. Under a conservative setting and basic usage (browsing the Web, working on productivity sheets, etc), expect the laptop to easily sail past the 4 hour mark. Apart from this, the laptop's an adequate performer, multitasks with 3 or 4 programs easily, but nothing extraordinary. It will let you watch an HD movie (with an acceptable audio-visual experience), but don't even think of gaming on the Satellite L40. In terms of features, the Toshiba laptop doesn't really miss out on any of the standard I/O fare.

We really like the fact that it comes with a 750GB hard drive at this price.

All things considered, the Toshiba Satellite L40 makes for a good basic home laptop that covers all bases and looks stylish.

If you have a soft corner for Toshiba, by all means go for it.
