

The Great Wall of Lumias

A giant wall made up of 200 Nokia Lumia 820 smartphones was put to display at BUILD 2013. Clever marketing indeed. <http://dgit.in/12qysWe>

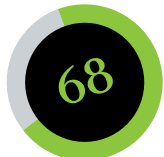

Google Glass update

Google Glass unit has received some updates. It now provides added support for more voice commands, working with Gmail, and web browsing experience. <http://dgit.in/15vQiIR>

The minute you pick up the 6D, you realize there is something different about it. It is an incredibly light camera, partly due to the fact that the top plate on the body is made of plastic. This was done to allow the GPS and Wi-Fi module to operate without any signal interference, which would have been prevalent had the Canon 6D retained the magnesium alloy top-plate.

The 6D has an 11-point AF system of which only the centre point is cross type with an AF sensitivity that can go all the way down to -3EV. IT also houses a newly design 20.2 megapixel sensor which has been paired up with a Digic 5+ image processing chip, the same one found in the Canon 5D MarkIII and the 1Dx. The imaging

Price

(body only)

aspect of the 6D is just as good as one would expect from not just a full-frame camera, but also from a camera with the Canon brand name slapped on it. The camera displays an excellent dynamic range, which we're tempted to say is slight higher than that of the 5D MarkIII even. While the camera doesn't work wonders with highlights, what it does do well is retain details in the shadow areas rather well.

However, the 6D is not without its faults. The 11 AF points aren't nearly enough, forcing us to recompose a lot of our shots. The lack of more cross-type AF points is also disappointing, so is the lack of a secondary memory card slot, something the competing Nikon D600 has.

Sony Xperia Tablet Z

The best Android tablet with weather-proof capabilities

The Xperia Z has taken the spot as the best Android tablet money can buy in India today. It brings to the table a slew of features such as India specific content where you can watch your favourite Sony TV shows on the tablet once they have gone on air. The skin on the Android OS is one of the better ones and doesn't have bloatware.

The tablet also showcases a slim and sexy form factor. Its under-the-hood power is the best that money can buy for Android. On the downside, the device may be late in receiving Android updates and 16GB on-board storage isn't the best.

The tablet also doubles up as a universal remote. If you have a device that isn't listed in the universal remote app,

you can program the tablet with the remote control of the particular device. Watching videos is a treat especially since the audio from the speakers is brilliant. You have two speakers on either side of the device to enhance the experience.

The gaming experience on the tablet is good too.

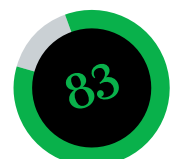

Price
₹44,990

The tablet is also PlayStation certified so you have access to Sony's library of games too. The tablet also boasts of weather-proof capabilities. If a weather-proof powerful Android device is on your horizon with price not being a problem, you can consider this tablet. It is a worthy contender to the iPad, which is still the best tablet out there. *Flip to*
