

Amazon's GameCircle

GameCircle – The Amazon-owned mobile video game platform has been expanded to support all Android devices available in market <http://dgit.in/1bnzXbL>

**Huawei TE30**

The videoconferencing system by Huawei which has built-in Wi-Fi support and voice dialing feature

Samsung 840 Pro 256GB

The SSD kingdom has a new ruler

It has been a long wait, but we finally have Samsung selling their SSDs in India. We got our hands on the Samsung 840 Pro SSD which houses a three-core MDX controller and 8x 32 GB Samsung MLC toggle-mode NAND chips. All the memory chips are attached on one side of the PCB. It all comes in a black coloured metallic housing with tapered chrome edges. According to Samsung, the three cores can each perform individual operations – reading, writing and caching/garbage collection – simultaneously. It bundles the Samsung Magician utility which allows you to secure erase the SSD, setting aside some space from the SSD for more efficient garbage collection along with other

₹15,588

standard functions such as firmware updates, SMART information and so on.

We tested the SSD on our rig comprising the Intel Core i7-3960X with 8GB Kingston HyperX DDR3 RAM using 2x Corsair Neutron 240GB SSDs in RAID 0 for real-life file transfer tests. ATTO benchmark gave a score of 4909 MB/s and 560 MB/s for sequential write and read speeds of which read speeds were as advertised. Crystal Disk Mark gave 390 MB/s and 360MB/s respectively for random read and writes (4K-QD32) which is an impressive number. Coming to AS-SSD benchmark we got an overall score of 1111 which is the highest we have got on any SSD so far. The IOPS scaled 94700 for Random reads and 82747 for random writes which was only slightly lower than advertised. As far as the real life tests went, the scores were as follows: Sequential Read / Write (MB/s): 355 / 357 and Assorted Read / Write (MB/s): 264 / 277. In terms of comparison, the Samsung 840Pro outperforms every SSD that we have tested so far, hence rightfully wins the Best Performer award.

Xolo Q700

A good budget Android smartphone

Price
₹9,999

For ₹10,000, it is easy to recommend the Xolo Q700 based on the features it offers. A fantastic build, good specifications, impressive display and a camera that can take good images in well-lit situations, runs stock Android, lasts for a day on a single charge. On the downside, it doesn't recognise HD video formats natively, and disappoints with low-light photos. Worth recommending. Visit page 108 to eke out more from this review.

Micromax Canvas A115 3D

3D still sucks

Price
₹9,890

For a 10K phone, it's difficult to recommend the Micromax A115 Canvas 3D especially since there are better performing smartphones available in the market and the 3D performance of the smartphone isn't stellar. As a standalone smartphone the performance of the Canvas 3D is average. The calling capabilities of the smartphone are good and the battery can last for a day without the use of the 3D capabilities. If a gimmicky 3D performance is what you are looking for, then the Canvas 3D is the device for you.
