Intel's new chip

The chipmaker will unveil a 4.5-watt Haswell processor for tablets and hybrids. Read more <http://digit.in/12tUBaE>

ZOTAC ZBOX NANO ID65 PLUS

A byte-sized PC

The ZOTAC ZBOX NANO is a very tiny PC.

Barely larger than the average school-going kid's tiffin box, ZOTAC has managed to pack in an i7 processor and 4GB of RAM. The box is tinier than most PCs that we've seen and is ideal for mounting behind a TV or discretely slipping it into some nook or cranny.

Despite its diminutive dimensions, the NANO packs quite a punch. The i7 processor is among the more powerful in the market and the 4GB of RAM coupled with the 500GB HDD is more than enough or day-to-day tasks.

Gaming is not really an option, the tiny size means that the device does get a bit hot under load and the lack of a GPU means that you can't really enjoy a compelling gaming experience anyway.

The PC is powerful, scoring 6920 in PCMark Vantage and 6290 in Cinebench's GPU tests. These scores also mean that this is the most powerful ZBOX we've tested and only the ID89 comes close. The MOP of ₹46,000 is very steep for this device though. Given its capabilities, the NANO would have been perfectly fine sporting an i3 or i5 processor. They would have run cooler and not sucked up so much money at the same time.

This ZBOX is replete with connectivity options and includes USB3.0, Wi-Fi and even HDMI and Display Port. It may be small in size, but it's well equipped.

Those looking for a tiny but powerful PC will not be disappointed by the ZBOX NANO, provided they can stomach the price of course.

IRISPen Express 6

Decent scanning capabilities but at a price

The IRISPen Express 6 is a good pen scanner and has no issues reading even the smallest of fonts: it could read out a 6 point font comfortably. It connects to your PC via USB. Setting up the device is relatively simple thanks to the software bundled with the scanner. It takes time getting used to, but the scanner has a roller beside it for easy scanning. There are two buttons in the centre of the device with their respective functions being changeable in the software. Its build is average but the design is ergonomic and sleek. At ₹9,999, it's quite expensive but if you need the features it offers, the IRISPen Express 6 is worth considering.

IRIScan Book 2 Executive

Works quite well

The IRIScan Book 2 Executive scans a whole page with extreme efficiency. The device is packed with a white balance paper required for calibrating it and a 2 GB MicroSD card. You have to charge the device using the provided power adapter. Making use of the IRIScan Book 2 Executive is very simple and all you have to do is press the scan button and move it over the document you want to scan. There are two buttons next to the USB port, one for changing the DPI and the other for selecting whether you want the scan to be in black and white or in colour. The device is Bluetooth capable and its compact design makes it a very portable gadget. The scans are saved in the MicroSD card and can be viewed on a PC over a USB cable. This device is perfect for scanning on the go.
