Cowon EC2

Go for its more polished elder cousin

The sub-1k IEM market is a very interesting space. There are a lot of efforts by manufacturers to come out with the "go-to" IEM for those on a budget. With Cowon's EC2 we have a strong contender for snagging that coveted title; if only it weren't for a few niggles. One, the wire is pretty flimsy, and the tips leave a lot to be desired. Two, the audio reproduction per se isn't bad, but what goes against it is the existence of the EM1 – Cowon's own offering at a piddly ₹100 more. The EM1 has a more well rounded sound signature with more clarity, and not to mention tangle free cables. Spend that ₹100 more and go for it, unless of course you're getting the EC2 for about ₹500.

Palit GTX 760 JetStream

Fastest GTX 760 so far

The Palit GTX 760 JetStream edition has two colour tones and comes with a massive factory over-clock of 92MHz (1072MHz base clock). The build quality is good and it's a triple-slot card. The load temperatures never crossed 74°C which is second only to Galaxy GTX 760 which had an impressive load temperture of 71°C. Benchmarks showed that this was the fastest GTX 760 we tested. The scores were between the older GTX 670 and GTX 680 cards. 3D Mark 11 (Extreme): 3050; Unigine Heaven 3.0 (1080p extreme): 43 FPS; Metro Last Light (1080p max): 25 FPS. The scores were 10-12 percent higher than stock GTX 760. A very good card for the price.

Galaxy GTX 760 GC

Good performance, good price

Galaxy GTX 760, just like other GTX 760 cards comes with its own custom design. It has a dual-fan setup which is housed within a plastic sheath below which sits a passive fin array containing four copper heat pipes to dissipate heat. The card is factory overclocked to 1058MHz up from 980MHz seen on the stock NVIDIA GTX 760. Score are as follows: 3D Mark 11 (Extreme): 2952; Unigine Heaven (1080p extreme): 42FPS; Sniper Elite V2 (1080p max): 30 FPS; Metro Last Light (1080p Very high): 25FPS. The scores were 7-10 per cent faster than the stock GTX 670. At ₹19,000 it offers good value for money.

ZOTAC GTX 760

Would rather wait for the AMP Edition

The ZOTAC GTX 760 has a design which is quite similar to the reference NVIDIA card. The card has a mild overclock of just 13MHz on the base clock - 993MHz as compared to stock 980MHz. Score are as follows: 3D Mark 11 (Extreme): 2755; Unigine Heaven (1080p extreme): 39.4FPS; Sniper Elite V2 (1080p max): 28FPS; Metro Last Light (1080p Very high): 23FPS. The scores weren't very different from the stock GTX 760. We would suggest you wait for our review of the ZOTAC GTX 760 AMP! Edition card. Among the current GTX 760s that we have tested, the Palit GTX 760 JetStream edition performs the best.
