

Good news fans!

Sony India's country manager has confirmed that the PS4 will launch in India in 2013 only.

Antec Nineteen Hundred

Antec revealed their new supWer tower (read huge) case christened Nineteen Hundred at Computex this year. <http://dgit.in/Antec1900>

Escape from Ennui

Since we met last, a lot of interesting developments have occurred, and quite a few rumours are now circulating the internet. We take a look at some of the biggest.

Google working on game console, Nexus Q successor and Smartwatch

It seems that Google is really pushing forward hard to position itself significantly in the hardware market, as reported by Forbes. Apparently, the MountainView crew is working on a sequel to the Nexus Q, an Android-powered gaming console and a smartwatch.

Forbes says that Google might be working on a "Nexus Q2," the update to their streaming device which didn't even make it to store shelves. The Nexus Q was supposed to be Google's solution to bringing music streaming to living rooms across the globe, but the project was scrapped shortly after

first Android-based gaming console, it's not surprising that Google would want to focus on this aspect of hardware space. While the cellphone and tablet market may seem saturated, the living room is yet to be populated by a device picked from a litter of options. If the Nexus phones and tablets are anything to go by, then if Google does decide to go ahead with a console, then we can be rest assured that the console would not only be a great performer, but also priced incredibly competitively.

Lastly, there is a rumour that Google may also be working on a smartwatch, just like Apple and Sony and LG. While Sony did announce their smartwatch recently, it remains to be seen

Hasn't the world had enough of Angry Birds already? No? Ok.

EA Makes PC games in India more expensive

The one big advantage that PC gamers had over console gamers in India was the price they paid for original games. A console gamer would have to shell out Rs. 2,499 at least for a game; the PC gamers would pay a mere Rs. 999. Thanks to EA's new pricing strategy, this is about to change.

Now, if the price hike was something acceptable, say 10% or so, the hue and cry wouldn't be so bad. In this case however, the price has increased quite dramatically. For a game like Battlefield 4 and Need for Speed, the price of the PC version of the game is up to Rs 3,499 and FIFA will be priced at Rs 2,499. Compared to last year's prices, the hike in price is a phenomenal 133%.

The price of the console games too has increased. This increase isn't so dramatic when compared to the PC prices as console gamers were anyways paying Rs. 2,499 for games. They will now pay Rs. 3,499.

If you thought the rise in the dollar rate is the reason for the

increasing price of the game, then that isn't the case. We have seen the prices of some games rise from Rs. 999 to Rs. 1,499 due to the dollar rate and that is acceptable. EA on the other hand is trying to maintain a uniform rate throughout the world. That means India too. Even though the market is small, it is still a gaming market nonetheless and if the price of the games are low in India, we will see a lot of illegal export of games and the sale of Origin codes to the international market.

Angry Birds Star Wars II

Developer Rovio has announced that the second iteration of Angry Birds Star Wars will be hitting mobile devices on September 19. Angry Birds Star Wars II will follow the story of Star Wars Episode 1: The Phantom Menace, Episode 2: Attack of the Clones and Episode 3: Revenge of the Sith. The game will also feature a "Join the Pork Side" in which gamers will be able to don the role of the antagonists.

Fascinating Google Orbs

it was announced. Now with rumours of a Nexus Q2, Google will hopefully at least stick to its guns and release the product, if it is making one in the first place.

The next rumour pegs Google's interests in the console arena. After the rather successful launch of OUYA, the

whether Google is actually putting its financial backing into a wrist-based smart device.

Forbes reports that at least one of these three devices would be revealed towards the latter half of 2013, but whether that actually happens or not remains to be seen.
