VLC Back on iOS

VLC, arguably the most popular third-party video player, is once again available for download for free on iTunes. <http://dgit.in/1bNpAxZ>

Angry Birds Star Wars II will feature intractable toys called Telepods. You can place these toys on the camera of your smartphone/tablet to unlock features and add characters to your lineup. At launch, Angry Birds Star Wars II will feature over 30 Telepods. Players can scan these Telepods to unlock in-game characters and powers.

Angry Birds Star Wars II will also see the launch of merchandise such as toys, clothing, books and other accessories. The launch of the merchandise will also launch this September alongside the game.

Govt. reveals Aakash 4 plans

After completion of the Aakash 2 project, the government is now officially gearing up for the fourth version of the ultra low-cost tablet, which is said to bridge the digital divide in the country.

Confirming the development, the department of Electronics and Information Tech-

compliance, maintenance and serviceability, other features, contents of tablet package and testing criteria. These specifications have been developed with a view to have a low cost device."

The proposed specifications of the Aakash 4 include a 7-inch LCD display with at least an 800x480 pixel resolution with 16-bit or higher colour depth. LCD brightness should be a minimum of 290 cd/m², and its contrast ratio should be a minimum of 500. For input, the government proposes multi-point projective capacitive touch with a minimum capability of five simultaneous touches.

For operating system, the government proposes an open source operating system complying with an Open License approved by the Open Source Initiative (OSI) - Default installed OS should be latest Android stable version (At the time of drafting this specification, it is Android 4.2.1 (Jelly Bean)) and Dual bootable (through external SD Card)

May at least this Aakash deliver what it promises

nology says in a release: "A Sub-Committee comprising of technical experts has prepared the proposed vendor neutral Technical Specifications of Aakash IV, which specify minimum hardware requirements, minimum software requirements, mechanical and environmental specifications, safety and other standards

GNU/Linux distribution (Latest Ubuntu).

The proposed processor of the Aakash 4 should score at least 1469 points in Antutu, a popular Android benchmark. For memory, the government specifies the Aakash 4 should have a minimum of 1GB DDR3 RAM. The tablet is likely to come with at least 4GB internal

storage and support for up to a 32GB micro SD card. The government also wants the Aakash 4 to have support for external USB storage devices, keyboard, mouse, popular 3G/4G data dongles, USB to ethernet adapters and USB printers. You can check out the proposed Aakash 4 specifications in detail here.

Ooooh a hybrid laptop

The government asks all interested stakeholders to give their comments on the proposed technical specifications of Aakash IV device over a period of two weeks. The Aakash is one of the important projects of the Indian government. In July 2010, the Minister of Human Resource Development, Sri Kapil Sibal unveiled a prototype of the ultra low-cost tablet, then dubbed as Sakshat.

Six Android and Windows 8 Hybrids

HP India has announced the launch of six new touch-enabled consumer personal systems products in India, in various form-factors, from notebooks to tablets, ranging from Windows 8 to Android 4.2.2 Jelly Bean. The company says the new devices have been designed to deliver extreme performance

and maximum mobility, and transform the way people engage and consume content.

Specifically, HP India launched the [1] SlateBook x2 and the [2] Split x2 Windows 8/Android dual-booting hybrids, the [3] ENVY Rove20 Windows 8-based AIO-tablet PC-hybrid, the [4] Pavilion 11 TouchSmart

Windows 8 laptop, the [5] ENVY TouchSmart 14 Windows 8 ultrabook, and the [6] Slate21 Android AIO. HP also added the Pavilion TouchSmart 20 and 23 to its Windows 8 AIO range.

Speaking at the launch, Ketan Patel, Director, Consumer Product Category, PPS, HP India, said: "People today demand extreme mobility and performance in their computing devices, to access and create content effortlessly anytime and anywhere. As India PC market leader, HP is happy to introduce the next-generation of PCs in a variety of form factors. These new products also bring novel touch experiences to help people connect, share and create in ways they never imagined."
