Pocket perspectives

A lot happened over the past month in the mobile space, from some consolidation of Android fragmentation to new devices such as the HTC One Mini's official reveal

Moto X due in August

Well, it's official. Well sort of, anyway. A new ad made its way to the Internet in July, which not only showcases some of the features of the Moto X phone but also reveals that the smartphone will hit Canada in August. It's safe to say that the smartphone will be available in a number of other markets in the same timeframe, but there's no information on an India launch date for the smartphone. In the meanwhile, Motorola has also sent out invites for an August 1 reveal. As of writing this story, a press image of the X phone was also leaked, seen on this page.

The ad comes from Canadian carrier Rogers Wireless and showcases features of the smartphone. Some of the new features of the smartphone showcased in the video are as follows. The smartphone will have an always-on microphone

so you can talk to your phone whenever you like without touching it and it will respond to you.

Rather than an LED light blinking in different colours to showcase notifications, as it does on the Nexus, the Moto X will showcase the notifications on the locked display screen with the icon of the respective notification. You can also launch the camera by simply twisting your wrist twice. On the Moto X phone, you can click a picture by simply tapping on the display. If you want to take multiple consecutive shots, you can do so by long-pressing on the display.

The Moto X phone will be available in two colours: black and white. The video showcases a black-coloured smartphone and in July, we also saw Eric Schmidt using the white version of the smartphone at the Allen & Co conference in Sun Valley.

The specifications of the smartphone are still a mystery but an ad released on July 4 claims that the smartphone will be customizable by the user. Personalization is showcased in this video, which is to say that the smartphone will recognize your voice. We hope the customization goes beyond software and has something to do with the hardware of the Moto X.

Nokia Lumia 1020 announced

Nokia revealed the Lumia 1020 to the world in July. We already knew almost everything about the Lumia 1020, thanks to the

Nokia Lumia 1020

number of leaks. The announcement proved that almost all of the leaks were spot on. It has the 41-megapixel sensor, the 6-element Zeiss lens with OIS and an aperture of f/2.2.

The Lumia 1020 is powered by the Qualcomm MSM8960 Snapdragon dual-core 1.5GHz Krait processor and Adreno 225 GPU, coupled with 2 GB of RAM and 32GB of on-board storage, with no option for expansion. The phone also manages to maintain a rather slim profile, keeping its size just about the same as the Lumia 920, with only a very slight bulge towards the top to house the camera module, which happens to be the real highlight of the phone.

If one was to look at the Pure View 808 and the Lumia 1020 side-by-side, you'd see the difference in the size and weight. This Windows Phone 8 powered device is a testament of how engineering can overcome the

impossible. For details about the Lumia 1020's camera, read more here: <http://dgit.in/1axGmDo>.

BlackBerry Q5 launched at ₹24,990

The Canadian smartphone manufacturer in July announced the availability of its first mid-range BB10 device in India, the BlackBerry Q5, with units hitting store shelves on July 20. The BlackBerry Q5 was launched at ₹24,990 – quite steep considering the not-so-impressive specifications, and for what was supposed to be the first inexpensive BB10 device, following the the launch of premium priced Q10 and Z10. The Q5 is available in black, red and white colours. Flip over to the Bazaar section of the magazine to read our review of the Q5.

The hardware QWERTY keypad-based Q5 is very similar in form factor to its more expensive sibling, the Q10, and shares

The Moto X launched in August

BlackBerry Q5 is priced at ₹24k
