Wi-Fi dead zone?!

This Quora thread explains how download speeds drop to zero exactly above your WiFi antenna. <http://dgit.in/DeadWiFi>

Geocaching: Get yourself out in the real world!

It doesn't matter if you're late in the game. What matters is that you're participating at all. Welcome to the new world of GPS-enabled real-world gaming

Priyanka Mathur

readersletters@thinkdigit.com

'Geeks', 'tech-freaks', 'video-game enthusiasts', 'technofiles' – do all these words bring to mind an indoorsy, eye-straining, sitting-on-the-couch-all-day picture in front of you? Are you still under the illusion that gaming only involves pulling an all-nighter in front of a flat screen putting the primates' opposable thumbs to good use? Well, snap out of it already and get out into the real world and you'll realize that gaming has come a long way.

What is Geocaching?

You must have heard of Geotagging, which is assigning geographic information to your pictures and linking them to Google Maps and other such applications. Geocaching is, well, a lot different than that. You can see it as high-tech hide-and-seek. It's a real-life treasure hunt, except that you don't get gold and diamonds in the end... maybe you might. Geocaching is happening right now, all over the world. There are about five million geocachers and over two million geocaches all around the world. Participants navigate to specific geo co-ordinates using their GPS-enabled devices to find hidden containers (called 'cache') usually containing

Geocache, better than real cash?

a small trinket and a logbook. There are only three rules in Geocaching. Rule 1: If you take something from the cache, leave something behind. Rule 2: Do not move the cache from

GPS device? Smartphone! Duh.

its original position. Rule 3: Log your experience in the logbook and on www.geocaching.com. Geocaching.com is owned by Groundspeak Inc., along with three more websites, all of which revolve around use of GPS to enhance outdoor recreation.

Playing the Game

For starters, you'll need a GPS-enabled device, which can be your smartphone or a GPS handheld unit (DeLorme, Magellan, Garmin). You can download the official Geocaching app from the Play Store (₹550) or iTunes (\$9.99 – approx. ₹593) on your smartphone. Look up a cache near your area from the 'Hide and Seek a Cache' page. Send its co-ordinates to your GPS device, and start looking. If you're not using the Geocaching Live-enabled app on your smartphone, another way to get the GPS co-ordinates is to enter the address manually in your GPS unit. Or you can download the cache listing as a LOC file (Basic Members) or GPX file (Premium Members). LOC files contain cache

name, terrain ratings and of course the co-ordinates. The GPX files, in addition to these, include hints to find the cache and 20 most recent logs. However you'll need a third-party geocaching software to read these files (Find one here: <http://dgit.in/134i5fr>). Premium members also get other benefits such as custom searches based on geocache size and attributes, rating of favourite caches, instant notifications for new geocaches and access to all Groundspeak websites. Premium membership will cost you \$30/₹1,780.

The geocaches can be located at diverse places. They can be located on a tree, buried underground or underwater or on a billboard near the city park. Make sure you read the details provided by the owner; you can even use the hints if provided but that would only make it

An inconspicuous gaming checkpoint
