

>>we'll train and mentor developers >>

>>Pratima Amonkar, Director, Audience Marketing, Developer Platform Evangelism, Microsoft India

You look at strategic audience marketing in India. What would your audience comprise?

It could be specialised developers, developers looking to transition or even students. Our audience also comprises IT professionals working across technologies be it web, mobile or cloud. In the true sense, we want to address everyone.

How has the developer community adapted to the recent changes in products?

The developer community has been grabbing every opportunity to get trained. Programmes such as developer training have really picked up. Through the past year we've done application training programs, we even created a world record for the maximum number of developers gathered for developing applications. Learning, training and getting them on to the bandwagon is really our priority now. We're going to actively help developers in India create 'quality' applications which will be capable of having a global impact. We are going to help the developer fix existing gaps.

In addition to training, what additional help would you provide the community?

Training is just one aspect of the work we do. In addition to this, there is mentoring needed for the community to reach the level where they are able to create applications that exceed expectations. We also have a Windows Application Excellence Lab. At the Application Excellence Lab, you as a developer can try out your app on different devices and get a feel as to how it appears across devices. >

>>You've been following devworx every month as you enjoy your favourite technology magazine. With your support, devworx has been on a steady rise, and is discovering its identity with you – the reader – the developer. While on one hand, it's an extension of your most trusted brand – Digit; on the other, it's tailored for application developers in India.

Whether you're an app development company based out of India, an application developer, or simply an enthusiast – you are nonetheless, a catalyst in India's growth as a software development powerhouse. Be it the Large Hadron Collider at CERN, or the Curiosity Explorer currently roving across Martian terrain,

Indian technologists and developers are a very close part of cutting edge innovation across the globe. We want to help you innovate!

devworx is an attempt to recognise such stories in software innovation, early on! Irrespective of where you stand in the scenario illustrated, we invite you to be a part of us. Whether you're an established app development company, a policy maker influencing the mobile ecosystem, or an individual developer, there's a lot to share with the community. We eagerly want to hear your story. Write to us today! Visit www.devworx.in and go to the Contact us and Careers pages for further information. You can also email us at editor@devworx.in.

Brackets

>>With features like Live Preview and Quick Edit, Brackets streamlines development without getting in your way. Brackets is an open-source editor for web design and development built on top of web technologies such as HTML, CSS and JavaScript.

<http://brackets.io>

Apache Cordova

>>Apache Cordova is a platform for building native mobile applications using HTML, CSS and JavaScript. Apache Cordova is a set of device APIs that allow a mobile app developer to access native device function such as the camera or accelerometer from JavaScript.
