DIY

Quick installation guide

To all those a little confused about setting up your PC, here's a quick setup guide to help you along

Here are all the components that you'll need to setup a decent HTPC, minus the cabinet of course.

All the components of a PC are designed to only go in one way. You need to be firm when installing components, but don't force anything in.

One drawback of a tiny little PC is that most custom heatsinks don't fit. You're at the mercy of the awful stock heatsink.

Audio, USB 2.0 and USB 3.0 headers. Make sure you put them in the right slot. Refer to your motherboard manual if you're assailed with doubts.

Make sure that all the front panel connectors go in the right place, especially the power and LED connectors.

Never forget to plug these in. In order, they are the 4+4-pin CPU, SATA Power connector, 6+2-pin PCI-e, 20+4-pin motherboard power connectors.

Cable management is crucial in an HTPC-sized case. Remember to ensure clean airflow.

Double check your connections, make sure that everything is screwed on right and connect your peripherals and power it on.
