Need a dual-sim Android

I have decided to buy a dual-sim android phone. I have narrowed down to the following choices after lot of ground work:

1. Samsung Galaxy Grand
2. HTC Desire 600 / Desire SV
3. LG Optimus L7II / L9II.
4. Cellkon Signature HD A119Q
5. Micromax Canvas HD A116.

Please help me choose a phone from any one of the above. What is your suggestion on the waiting for Samsung Galaxy S4 Dual-Sim (or) HTC One Dual-sim? Will the wait be worth it? Also, please do suggest me some other better alternatives that are worth their price tags. I don't mind paying few extra bucks for good quality.

Santosh Anand

A To start with, the HTC Desire SV and the Cellkon Signature HD have been discontinued so stay clear of these devices. you may find a few with retailers but that's about it. Considering the devices you have selected you are looking at a sub 20K smartphone with dual-SIM capabilities. The Galaxy Grand Duos is a good option as it has the ability to run all the apps from the app store and also has the TouchWiz UI giving it some added features. The display could have been better, but it gets the job done nonetheless.

The Canvas HD on the other hand has some impressive hardware and a good display. The 4.2 JB update is out as well so you do get a good deal for the price you pay. If you want a raw Android experience and want to meddle with the ROM and stuff, you can consider the Canvas HD. I would suggest stick to one of these two smartphones as they are tried and tested market products.

Need an affordable workhorse laptop

I was checking around few laptops in the market and the Lenovo S400 struck me as a well designed and sleek model. My dealer is offering the following specs for this laptop for ₹39,095 inc. taxes.

- Lenovo S400
- Core i3 1.5 Ghz processor
- 4 GB Ram, 1 TB hard disk, 1 GB AMD GPU, Genuine Windows 7 and an additional Lenovo wireless mouse.

I wanted to know whether this was the best laptop I could get for this price?

And is this laptop good for my work? I run a small magazine of my own and run softwares like Illustrator, Photoshop, Corel Paintshop together in multiple windows. And I'm mainly into graphic design and article writing. I'm planning to buy a Wacom Bamboo One soon. Will they work well together. Is this a good choice or will it affect my productivity any way? It'd be lot helpful if you could give me some suggestions on other available laptops that are good performers for less than ₹40k.

Thanks a lot :)

Vidyadhar Sharma

Lenovo S400

A Among the options that are available, it is rather sad that none really match up to the Lenovo S400 deal that you managed to find. While some alternative machines compromise on weight (HP G6, Lenovo Z-series), there are others that pack in older generation hardware (HP Sleekbooks).

We would suggest you go ahead and buy the S400.

Also, the Wacom Tablet should not have any problems in working with this machine. It is only dependent on the drivers, which can be downloaded from here - <http://www.wacom.asia/tablet-drivers>

Gaming rig woes

I'm currently in a dilemma over assembling a gaming pc. I've been very confused for the past one month about it. The release of Haswell processors made the choices more confusing. Intel has more no. of threads whereas AMD has more cores. Many of my friends have gaming PCs, all powered by Intel. I have never played on an AMD gaming rig. So cannot decide between the

two. Though Intel has integrated graphics, they'll hardly be of any use as I'll be having a discrete graphic card. Thus budget wise AMD + very good graphics card = Intel's good processor + a graphic card. But I don't know which one would give better results.

Shortlisted combination:

- AMD FX8350 + Zotac GTX760 + Asus M5A97 EVO R2.0 or
- Intel i5-3570 + sapphire AMD/ATI HD7950 + Gigabyte GA-Z77MX-D3H

My budget is around ₹65,000 with a buffer of plus or minus ₹2,500

My intended use is: Overclocking, Gaming primarily/ full HD playback / torrent downloading etc

Ritvik Beli

A We see that you intend to do over-clocking along with gaming on higher resolutions. In that case you will require an unlocked processor. From our testing of games, there are very few games that will utilise over four cores at a time, so getting an 8-core processor from AMD is a bit pointless, as if you look at per clock performance, the Intel quad-core processors are still better. Fussing over getting a Haswell chip over the not-so-old Ivy Bridge platform is a bit pointless at this stage as it is still early days for Haswell. No doubt the performance has improved by 10-15 per cent, but since the platform is new, the prices will be high as well.

An ideal thing for you to do would be to go for a decent processor and use the money saved to get a better graphics card. Here is our suggestion for your rig:

- Processor: Intel Core i5-3570K (₹15,000)
- Motherboard: ASRock Z77 Pro4 (₹9,000)
- Graphics card: ASUS GTX 660 DC2OC (₹16,850)
- RAM: Corsair Vengeance 8GB (2x4GB) (₹4950)
- HDD: WD 1TB caviar Blue (₹4100)
- CPU Cooler: Cooler Master Hyper TX3 EVO (₹1450)
- Monitor: Dell S2240L (₹9300)
- Cabinet: NZXT Gamma mid tower (₹2450)
- PSU: Corsair Builder Series CX500 V2 (₹3400)
