

Into the Void

Websites and apps for the landlubbing outer space junkie

Umang Moda

readersletters@thinkdigit.com

Since the beginning of time, mankind has had a profound infatuation with the unknown, largely because our existence is based on curiosity. The realm that is outer space has intrigued the human mind for eons and it's peculiar to note that both share a common aspect of boundlessness.

In today's modern world, there's the presence of a third which is just as vast as the mind and space, the Internet. Mentioned below are various portals and apps that will help quench your thirst for infinity and beyond.

Best Websites

1. Astronomy Picture of the Day

Website: <http://dgit.in/astropod>

The complexities and mysteries shrouding outer space are hard to imagine. This is where pictures come to our rescue. The 'Astronomy Picture of the Day' (APOD) webpage, which presents a new picture or a video every day, was created 18 years ago by NASA scientists, Jerry Bonnell and Robert Nemiroff with support from NASA, the National Science Foundation and Michigan Technological University. The design is very minimalistic with photographs and videos accompanied by a succinct overview written by a qualified astronomer. In operation since 1995, APOD could possibly be the biggest database of annotated astronomical images on the interweb.

2. We Choose The Moon

Website: <http://wechoosethemoon.org/>

The landing of the Apollo 11 on the Moon back in 1969 would eventually be the most seminal moment in the history of

If you stare long enough at this picture, E.T.s will make contact. Try it. We dare you.

Apollo 11 put the first man on the moon. It also inspired R.E.M. to verse. Sniffle.

our existence. It is nigh impossible for any individual, even in moments of complete, utter derangement, to experience the thrill coupled with fear, running through the veins of the crew on that spacecraft. 'We Choose The Moon' is the closest anyone can come to realizing the severity of the arduous task Neil Armstrong and Buzz Aldrin were faced with. The name of the

website itself is taken from a speech given by John F. Kennedy and is a fully interactive recreation of the whole journey right from the point of launch to the landing on the Moon. It employs mission audio for an authentic experience. The sheer hard work and commitment to commemorate the mission's 40th anniversary is conspicuously visible in the website's gorgeous design.
