Facebook board game

Can you imagine Facebook as a real world object of communication? Here is the board game design of Facebook: <http://dgit.in/12yJ7v>

Space Age

3. HubbleSite

Website: <http://hubblesite.org/>

Our understanding of the cosmos has largely been shaped through the study of photographs taken by the Hubble Telescope, launched in 1990. Its creation marks a majestic step in technological achievements, and deep space research is a part of our reality majorly due to the Hubble. 'HubbleSite' is run by Space Telescope Science Institute and exists to share the heap of discoveries made thanks to Hubble. Besides all the scientific achievements the Hubble is responsible for, the website is also a cornucopia of spectacular photographs delving into the furthest of reaches into space. A section of the site is dedicated solely towards the working of the revolutionary telescope, providing a detailed insight for any space enthusiast. The website has its own eponymous app for the iOS at <http://bit.ly/1958qwu> for those looking for a mobile experience.

4. UFO Watch

Website: <http://www.ufowatch.com>

The countless endeavours embarked upon to explore space also attempt to answer the age-old question – "Are we alone?" The controversial phenomenon of Unidentified Flying Objects being spotted around the sky here on Earth has given birth to dozens of conspiracy theories. If looked at constructively, UFOs ignite a flame of curiosity in us. 'UFO Watch', founded back in 1998, serves as a one-stop source for a vast array of information, including sightings and alien abductions. It's also updated with the latest news regarding UFO activity and accounts from individuals who've been a witness to such phenomena.

5. NASA

Website: <http://www.nasa.gov/>

The official website of the National Aeronautics and Space Administration (NASA) hosts an invaluable bank of data regarding Outer Space. The website is constantly updated with all the latest news even minutely surrounding space and lists all the missions the agency has

Hubble gave earthlings one spectacular lens in orbit

undertaken and will be undertaking in the future. The multimedia section comprises information-rich images and videos. Various interactive features are also present. A section on the landing page showcases a fascinating and interesting image per day. You can also watch NASA Television (NTV) on the website.

Best Apps

1. The official NASA app

Availability: iOS, Android – Free

Download Link: <http://bit.ly/11ZVPbv> | <http://bit.ly/18mKgKX>

NASA has its own app for iOS and Android and is free to download. It serves as a much more interactive version of the website and features latest news, photos, videos etc.

2. Exoplanet

Availability: iOS – Free

Download Link: <http://bit.ly/120kcmv>

Exoplanets are planets revolving stars

Smile! You're on candid astronaut cam!

other than the Sun and outside our own solar system. The Exoplanet app features a beautiful 3D model of our galactic home, the Milky Way. This app was created and is managed by professional astronomer, Hanno Rein. Updated on a daily basis, it features a push notification system upon the discovery of a new planet.

3. Space Images

Availability: iOS, Android – Free

Download Link: <http://bit.ly/1auEQhP> |

<http://bit.ly/14i8hDR>

Made by NASA's Jet Propulsion Laboratory, the Space Images app displays a myriad of images covering planets, stars and galaxies. You have the option of saving your favourite pictures and sharing it with your friends on Facebook and Twitter. You can also save the images on your phone and make them your wallpaper. The ability to browse through different categories makes its navigation particularly simple.

4. Mars Globe

Availability: iOS – Free

Download Link: <http://bit.ly/15P1UGU>

Due to its close proximity and similarity to Earth, Mars has always been touted as a potential planet to harbour life away from earth and is a favourite when it comes to discussing the hypothetical question of space colonization. Mars Globe for iOS lets you take a virtual tour of The Red Planet. While there's a guided tour that highlights some of the most intriguing features of the planet, you also have the option of exploring different sites of the planet independently. There are over 1500 annotated surface features coupled with information and links.

5. Moon Phase Pro

Availability: Android – Paid (₹50)

Download Link: <http://bit.ly/1dH4U96>

Moon Phase Pro for Android stimulates a gorgeously interactive 3D version of the Moon. The level of accuracy is high and it renders dynamic shadows of surface features such as craters and mountains. The ability to see all the different phases of the moon along with crescent angles and rise/set times is a nice touch.
