The mystery of the disappearing thumbnails! And other maladies solved

Yet another month where the Digit team and the diligent folks from the thinkdigit forums save the day every day. They'd have gone scot free if it weren't for these meddling folks.

Thumbnails Disappeared

It has been two months since I installed Windows 8 on my pc. All the thumbnails of videos and music were visible at first, but somehow the thumbnails are gone. It happens every time after 1 to 2 months after reinstalling windows. (Yes, I reinstall windows from time to time). Tell me how to bring back the thumbnails. Thanks in advance.

Harsh Khurana

A If Windows Explorer in your PC is regularly facing this issue then you should check whether this happens after you install a particular program. Anyway, in order to enable thumbnails back again, you can open Windows Explorer > Options > Change folder and

Thumbnails" in the right pane > Double click on it > Select Disable > Apply > OK. You should be able to see thumbnails in the explorer now.

Irritating Beeps

My system config is:

- Intel DG41RQ desktop board;
- Intel Core 2 Duo processor;
- 2 GB RAM;
- 320 GB HDD;
- Windows 7 SP1 x64-bit;

Whenever I start my PC it beeps twice, once before showing the Intel logo and once after it. I have tried to update the BIOS but that does not change anything. Apart from this everything works fine. The beeps irritate me a lot.

Binay Kumar

that does not seem to be working at all. It's starting from where I had previously quit the game. So can you give probable reasons for this and also solutions for them?

Priyatam Yasaswi

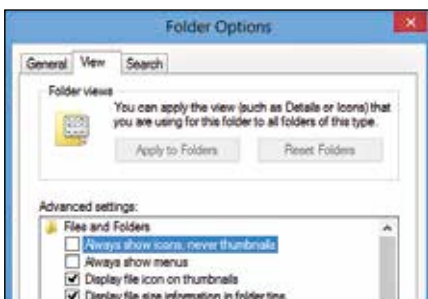

A F1 2012 is a great game but it's known to have that issue. The developers, Code Masters Racing released a number of patches for the game to fix these issues. You will need to go to their website and download the latest patch and that will easily fix the problems you are having while saving problems. Keep in mind, you need to have an original version of the game to do so.

Virus woes

This is my first letter. I have a 500GB Sony external Hard Disk Drive full of files. It has been infected by viruses. The files show up on a non-Windows OS. Please help me. I want to delete the viruses but I want to keep the files. Thanks in Advance

Abhi Raman

A The best way is to connect your drive to your computer with Autoplay turned off. Make sure you have a good antivirus like Avast installed on your system. Do not attempt to open the drive by double clicking. First run a scan of the drive in order to quarantine or delete viruses present. If somehow, you are not able to run scans on the drive using antivirus software, you can then think of using a Linux Distro. Create a bootable USB Linux system > install an antivirus software on it like ClamAV > run the scan > you're done. For a more detailed step-by-step procedure to do the same head here: digit.in/WinVirusHelpLinux.

Certain programs may disable this option

search options > Select the View tab > Uncheck the box that says Always show icons, never thumbnails. Once you do this, you may be able to see thumbnails on your files.

If that doesn't work out, then go to Run > Type "gpedit.msc" and hit Enter > Navigate to User Configuration, Administrative Templates, and Start Menu and Taskbar in left pan of Group Policy Editor > Locate "Turn off Taskbar

A When the computer powers up, the power-on self-test (POST) tests whether all hardware is working properly before starting the remainder of the boot process. If the computer passes the POST, it will have a single beep, but some motherboards have a BIOS that make it beep twice. The Intel DG41RQ is one such board which beeps twice during startup. Since your computer is working fine, you need not worry about it at all. But if you really get that irritated by the beeps then we're afraid that you may have to live with it because the speaker on the Intel DG41RQ is soldered on to it and it can't be unplugged.

Game save issues

I have F1 2012 (from Code Masters Racing) installed on my computer. It has been very interesting till now, but suddenly the game is not auto saving and when I try to save the game manually
