TouchSmart 11 came along. But nothing takes away from the F202e's premium finish.

Acer Aspire V5-471

Yet another neat ultrabook from Acer, but still doesn't take that final step towards being a "premium" offering. The light colour finish on the lid and the keyboard deck of the Aspire V5 looks very nice. The thin lid adds to the overall slim persona. But, this is where the problems creep in. Hold up the machine on its left side, and the screen

shows ripple. The ripples show up every time you tap on the screen, and the lid hinge isn't great either – the display rocks considerably when the touchscreen is used. Quite frankly, this is unacceptable.

For its specs and price, the Aspire V5-471 does pretty much the standard performance numbers you would expect, but with just 109 minutes of battery life clocked in our tests, it is among the lowest, with only the Lenovo Z400 Touch scoring lower. When machines that cost almost

₹10k lesser (VivoBook F202e) come across as infinitely better built, you don't mind sacrificing the screen size for a bit.

Lenovo IdeaPad Z400, Z500 Touch

A fairly recent launch from Lenovo, the resemblance to the U-series of ultrabooks is more than evident in the IdeaPad Z400 and the IdeaPad Z500 notebooks. The finish is completely matte and non shiny. Open the lid and the keyboard deck has a light grey finish

throughout. But, there is no running away from the fact that for a 14-inch laptop, this is heavy at 2.3kg. If you can come to agreement with that, the specifications and the performance for the most part will impress. For one, there is the fairly capable NVIDIA GeForce GT635M (2GB) graphics. While a lot of machines without the additional touchscreen offer good graphics cards in this price bracket, the ones with touchscreen usually don't. The 15-inch version,

Lenovo IdeaPad Z400 Touch

the Z500, comes across as a bit more agreeable in terms of weight because of the bigger form factor, and offers fairly powerful specs in its own right.

The performance is indeed very good on both machines, once you clean the Windows installation off all the trial software and the unnecessary startup items that's bundled within, and this machine will handle gaming quite well. Unfortunately, battery life on the Z400 isn't the best, and it clocked a measly 96 minutes in the battery benchmark. Translated into real life, expect just a bit more 2.5 hours at best, if you are very careful.

The keyboard design needs a bit of work, because the placement and design of the enter and the arrow keys isn't the same as what we traditionally see on laptops, and that can somewhat confuse the fingers.
