AOL to acquire Adap.tv

AOL announced that the company has reached an agreement to acquire a California based Adap.tv for \$405 Million USD. <http://dgit.in/1cv68YR>

Nokia Lumia 520

Most inexpensive WP8 cell

The Lumia 520 is definitely a budget phone, as you can tell from the low-contrast 480x800 pixel display, or the lack of 1GB RAM or even an LED flash for that matter. However, the OS is so well optimized that the behaviour is identical across the range of all WP8 devices, regardless of their price. The Lumia 520's camera is decent for most day-time shooting, with quick response and good images. It has 8 GB of on-board storage which can be increased to 32GB with the help of a microSD card. For the price, the Nokia Lumia 520 is an incredible little phone offering an excellent balance between price and features. Definitely worth considering.

Micromax Canvas 4

A smartphone with a lot of gesture controls

The Canvas 4 has the same hardware as its predecessor, the Canvas HD, which performs well. It comes with a slew of gesture controls. These gesture controls can be used to pause a video when you turn away, pick up a call, reject a call, switch on the loud speaker and more. The build of the smartphone is good. The Canvas 4 has stock Android UI and comes preloaded with Micromax apps such as the M!Store. The camera on the smartphone clicks good images in both well-lit and low-lit situations.

Lava Iris 504Q

Budget quad-core with gesture support

The Iris 504Q has the same quad-core CPU and internals found on other 5-inch smartphones running on the MediaTek SoC. The smartphone brings with gimmicky gesture support. These controls aside, the Lava Iris 504Q is a run-of-the-mill quad-core budget Android smartphone. Games and apps runs smoothly and the touchscreen is responsive. Its battery has enough juice to run through the day but camera's average. There are quite a few smartphones in the market boasting of similar specifications.

Samsung Galaxy Grand Quattro

An average 15K smartphone

The Galaxy Grand Quattro has the tried and tested Samsung design and build. The Android OS is overlaid with the TouchWiz UI. The smartphone comes preloaded with Smart Stare, which refused to work. Natively the smartphone didn't recognise any of our video formats - AVI, MP4 and MKV. We had to resort to third part video players for this. For it's asking price, the Quattro's difficult to recommend especially since you have devices such as the Xolo Play T1000 and others selling at a cheaper price band.
