The Social Netowrks were abuzz with activity this month. Find out what's been happening

**BB exits consumer market**

The troubled smartphone maker will lay off 4,500 employees and focus on prosumer and enterprise customers only <http://digit.in/16mefid>

✉ Hello Team Digit, how are you guys? I've been reading Digit for 5 years now. Last month's issue was really interesting. Digit always delivers the best technology content and most of it is seriously useful to me, especially the DVDs.

I'd like to point out a few things here which I think can be made better. Firstly, the little snippets of information that you give at the top of each page are really helpful but many times it's really disappointing to see the same fact being repeated in two to three pages. Also, if you could replace the sections' page numbers in the snippets with some more facts it would be really nice.

Secondly, I've always seen you guys focusing on Windows or iOS or Mac or Android but always kind of ignoring Linux platforms such as Ubuntu. I'm an Ubuntu user and it's disappointing to see that your content always caters to those platforms only. Please publish a Fast Track on Ubuntu and reserve some space on your DVDs for Linux platforms.

Besides this, I find everything else really helpful.

Asit Khanda

4 Yes it appears we've not been showing enough Linux love lately. Thanks for the suggestions. We'll definitely bring them up at our next edit meet. About the snippets, we'll try our best to not repeat them.

Siddharth

✉ I went to buy EFY magazine from a local vendor in July and luckily saw a Digit edition with 'Fast Track to Mobile and Laptop Hardware'. I quickly grabbed it. Since I'm an Embedded Hardware professional and have worked on Intel mobile platform that Fast Track issue was so helpful. You may not believe that I used to carry that booklet around for quick reference. It has become like hot property among my colleagues who've been asking to borrow it from me for the past 2 months. Going through some of the articles is helping me gain quite a lot of knowledge. There are people who prefer hard copies rather than a digital copy. For such people, Digit is one of the copies to grab from the market. Frankly, before this I never had an idea about this magazine

Feedback for the September 2013 issue of Digit

and now I'm a big fan of Digit. While writing this letter, I have a 'Fast Track to PC Hardware' in my hand – yet another favorite for hardware guys.

After going through the magazine over the past two months and having also grabbed a copy this month a few days back, I have a few suggestions:

1. Why don't you provide more coverage from the hardware point of view which is of high interest to us hardware guys?
2. Why don't you dedicate a page to comparing latest technologies (Example: IPS v/s AMOLED displays, comparison of cortex processors, etc). In Fast Track's July issue, I saw this but it was not easily understandable. A detailed comparison would help us a lot.
3. A separate page for some of the Indian start-ups, especially in embedded systems technology.

I came to know through a reader's letter in the September edition that Digit published Fast Track issues for Windows 8 and Intel architecture. How can I get these Fast Track issues?

Dharaanidbar Chatrathy

4 Thanks for writing to us. It always feels nice to get feedback from new readers. All of us at Digit are glad you liked the last two FTs. It reaffirms faith that nuts-and-bolts hardware guys are not a dying breed in

today's age of tablets and smartphones.

1. We definitely plan to cover more hardware in the upcoming issues.
2. You'll find many of these comparisons in Digit 101, we do have refreshers now and again as well.
3. We're certainly planning a story (maybe cover story) on Indian start-ups.

If we have those FTs in stock you can order them from the Fast Track Book tab at <http://www.thinkdigit.com/store>

✉ When I received the magazine, I quickly opened it and saw a question mark on the cover page and thought there must be something awesome in this month's issue. As expected I was right. "How many form factors will we experiment with before arriving at the perfect computing device?" – This question touched me. It must have involved very deep thinking, for sure. The cover story was awesome, and I loved the way you described everything in detail. The "True Potential" section was really good. Please keep up the good work. Tips and Tricks were helpful. And this is the first time I'll say that Tried and Tested was well organized; the laptop's pic was just below its name and the reviews were also separate compared to when I first subscribed to your mag. I think the reviews must be
