

\$100,000 per TB

Oracle has come out with a columnar data server that's as fast as DRAM. But at a price. <http://dgit.in/18RPG3K>

The last dwarf

A group of French researchers claim that they've found the "cure" to dwarfism. <http://dgit.in/1akmOye>

smartphone. I am think of buying the Samsung Galaxy Star. PLEASE let me know if it's a good buy?

My budget lies around ₹5,000. If you can please suggest other smartphones of this range by international brands I would appreciate it. Is Nokia Asha 501 worth looking at to buy?

Thanks in advance!!!

Aishik Saha

A The Samsung Galaxy Star and the Micromax Bolt A35 are the most popular Android powered smartphones in the sub 5,000 price range. Having said that, these smartphones don't deliver a satisfactory Android experience. You will face problems such as lag during multitasking, a lacklustre camera and more. The Asha 501 on the other hand is a feature phone but is really good at what it does. The interface is smooth and you do have access to popular social networking sites.

If you want a device that works well as a phone and can give you a bit of internet and multimedia use, we suggest you take a look at the Asha 501 before going in for an Android device. If, however, you can extend your budget up to ₹9,000, there are a good number of Android smartphones to choose from including the Xolo Q700 among others.

Assembling a PC

I have decided to assemble a PC in the month of October. My budget is about ₹55,000 (May be extended by a maximum of ₹5,000). Basically, i will use the PC for web development(will be running Photoshop, Illustrator etc.) , running many applications and browsers at the same time, watching HD movies, and playing games like Splinter-cell,

Component	Particulars	Price
Processor	Intel Core i5 4570	14,600
Motherboard	DH87-RL	7,550
RAM	Corsair Gskill Kingston	4,450
HDD	WD Seagate 1TB	4,500
Monitor	Dell S2240L	8,950
Graphics card	NVIDIA GTX 650	8,500
Cabinet	Huntkey T91	1,650
PSU	Corsair GS600 (V3)	4,500
Total		54,700
Budget		55,000

Age of Empires, Need for Speed Franchise etc. I don't have any preference for either intel or AMD. Any of these will do as long as I am able to do all the work. I don't want to buy a DVD drive as i will use my LG 24x writer. The monitor should be as large as my budget would allow.

Thanks in advance.

Kinshuk Kashyap

A Hi Kinshuk,

Since your primary focus is towards web-development where the visuals matter we've suggested an IPS panel for the monitor. Since they are a bit expensive the maximum we could squeeze in was a 21.5" display. A quad core processor + a good graphics card + 8GB RAM would be more than sufficient to handle Photoshop and Illustrator even if you are working on a huge canvas. The i5 was selected to handle the gaming workload that AAA titles would require for the next 2-3 years. However, the GPU qualifies as the bare minimum configuration for most games so don't expect fancy graphics. If the dollar exchange rate does go down and you manage to squeeze in an extra 5k then a GTX 660Ti should suffice for max resolution gaming for about a year. An SSD does not fit into your budget and your final power consumption comes down to 340 Watts. So a 600W power supply will be more than sufficient for future upgrades and do take care to either disable the C7 power state in the BIOS or go for a Haswell compatible PSU. If you really do want a larger monitor, pick one from our killer rigs sections.

Budget droid please

Hi Sameer, I'm Abhijit from Aurangabad, Maharashtra. I read the reviews by u on mobiles and this are very useful. I have to buy my first Android mobile in price segment of ₹7,000-8,000. Which mobile is having good configurations, good after sales service and other points. Guide please.

Abhijit Khairnar

A Hi, Since this is your first Android smartphone, we suggest you take a look at the Xolo Q700. The smartphone has a

good build, stock Android interface and is a good smartphone. the camera isn't the best, but budget smartphones usually do compromise in this area. The Q700 will give you a good user experience.

I want a Nexus 7

I want to buy a 7 inch tablet and my budget is ₹15,000. I am intrested in buying a tab from the nexus series being a geek myself. I wanted to know if there is a better tablet than the nexus 7 2013 in the market. Also where can i get the nexus 7 2013 edition, 3G is not a requirement.

Anmol Dhand

A Hi, As of today there is no better Android tablet to purchase other than the second generation Nexus 7. You can get your hands on it from eBay global easy buy and maybe if you wait a bit, on the Google Play Store.

Windows 8 to Windows 7

When we buy a laptop, generally the default OS is windows 8. Can I change to windows 7 then and there?

I prefer W7. Will I be given original w-7 cd also? I mean I want W7 in exchange of W8. Kindly help me.

Subhankar Mondal

A This is a tricky question. There is an official way to downgrade to Windows 7, but you can only do that with copies of Windows 8 Pro that come with "downgrade rights". Some OEMs, including Lenovo, give you the option to downgrade if you ask them before purchase. Here's a complete guide that will help you. <http://dgit.in/19vHWRf>
