

called Company Buzz. This application helps track what people are saying about you, your company or product via microblogging on Twitter. That's not all. You can also see a time-varying trend to track information over time, and modify search queries to catch Twitter trends. To install this application go to <http://dgit.in/185HpXz>. Once added, you can type in search queries in the search toolbar, click on the "Follow Topic" tab that appears on the upper-left side of the page and view instant Twitter feeds.

Check out LinkedIn plug-ins

Developers at LinkedIn have come up with some really fancy applications and plug-ins to act as useful value additions. Go to <https://developer.linkedin.com/plugins> to see an array of plug-in options that you can install. Some of the cool member-based plug-ins let you embed a profile summary card on your personalised webpage or simply a neat LinkedIn logo that shows your profile summary card on hover.

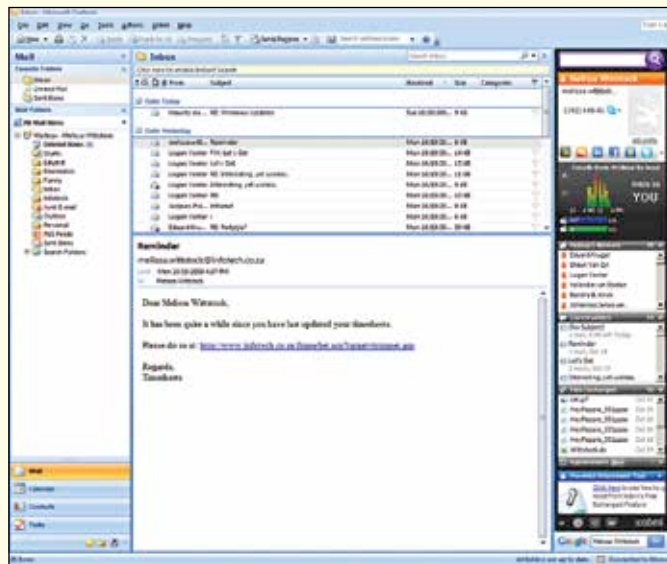

Sync LinkedIn with Twitter

There are quite a few users who are very active in cyberspace including in the Twitter blogosphere and the LinkedIn network. If you're one of them, you might want to share your LinkedIn status updates on your Twitter profile. To do this, simply post the update in the update box and click on the 'Share With' box below. Choose 'Public + Twitter' from the dropdown menu and press Share to post the update simultaneously on your LinkedIn and Twitter profile.

MS OFFICE ADD-INS

So now with Microsoft calling all the extensions of Office

Xobni for outlook gives you details of each contact in one pane

2013 'apps' instead of 'add-ins', you might be wondering what the difference actually is. Well, even though an add-in (or add-on) extends a software's functionality, and most apps can work by themselves; in this context, they're as essentially the same because the apps have little relevance outside the suite anyway.

This Tips & Tricks section focuses on some of the few add-ins that definitely improve your MS Office experience.

But first up, you'll need to activate the add-ins. For this, all you need to do is download the .exe file from the respective

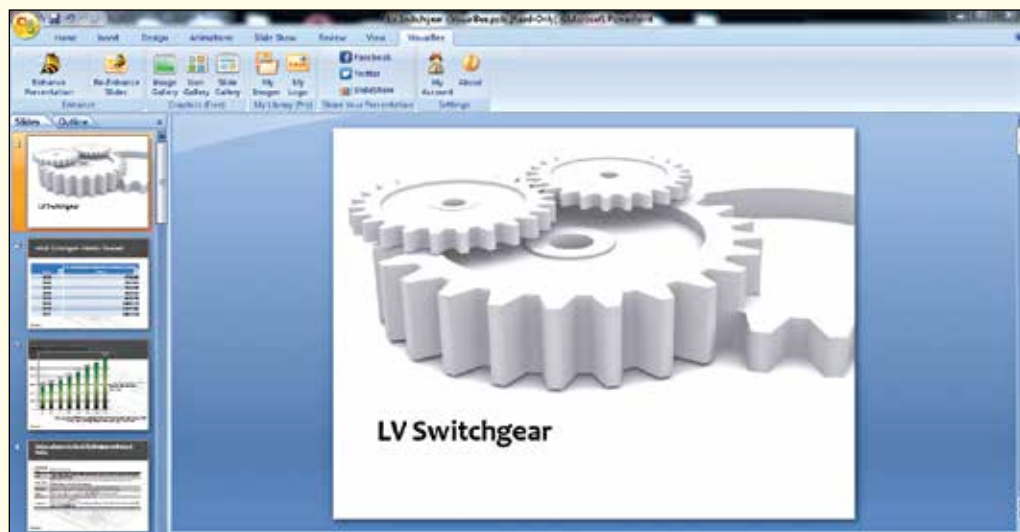

links (that we've provided here) and then directly install them. After the installation is complete, the add-in works seamlessly with MS Office, and all you need to do is go to (Word/Excel/PowerPoint) Options > Add-ins. You should be able to manage your add-ins from here. This works for versions till Office 2010. For MS Office 2013, however, after you install the app, by just adding it from the respective sites – just go to Insert > Apps and double-click the app to activate it. So here's a list of some must-have add-ins/apps for your MS Office suite.

Enhance Outlook with Xobni

Xobni derives its name from the reverse spelling of 'inbox', and its creators claim that it was created for exactly that reason – to take back their inbox. It's an amazing free add-in that helps you boost the functionality of Outlook (2003/2007/2010). It makes Outlook more powerful in various ways by helping you organize, search and maintain your contacts and their info all under one pane in Outlook. Xobni also integrates seamlessly with social networks such as Facebook, Twitter and LinkedIn. Thus, when reading mail or just scrolling through your Outlook contacts in the Xobni pane you'll be to see info related to the contact – such as their photo and details such as title, company info, etc – as well as their updates on the various social networks. It indexes your mail making it way faster and more effective than the built-in search that Outlook provides. It also enables you to add more gadgets to help integrate services such as Evernote, Dropbox and Skype, making Xobni a must have add-in for your Outlook.
