

Create stunning visuals with Lucidchart for Word

This tool lets you design flowcharts, mind maps, organizational charts etc. within Word 2013. Very powerful, easy to use and allowing you to collaborate with an unlimited number of other users, this diagramming software will let you export your diagram to social media sites, thus saving you the time to actually download it and distribute it manually. Available on all major platforms, this add-in is a must have.

Write like a Sir with Merriam Webster Dictionary

One of the most respected names in the dictionary business gives you a very necessary add-in (for Excel 2013 and Word 2013) that lets you access its entire dictionary database with one click. Just select a word in the document that you're reading or writing and right-click to view not only its definition, but also its syllables, accents and correct usage examples. It will also enhance MS Word tools such as spelling and grammar checker, and thesaurus. This is a very useful extension for all students, and just about anyone with the slightest inclination towards becoming a better English writer.

Spruce up your presentations with VisualBee

If you've gotten bored with how monotonous your PowerPoint presentations look, then look no further than VisualBee for the 2007 and 2010 versions. You no longer need to manually go to different sites to download and install the theme of your choosing. VisualBee contains more than 15,000 presentation design icons and more than 300

style options. Each style provides a different design in terms of background, types of images, colour combinations etc., even pertaining to particular fields such as education, finance, sports etc. It actually analyses the content of the slide deck, and tries to enhance the entire presentation with the help of the thousands of images present in its visual bank. All, with just a single click. There are minor issues like the fact that you need internet connection to be able to use it, and the images might take some time to load, but it's worth it for anyone who makes PowerPoint presentations on a regular basis.

Sync Outlook using CompanionLink

Outlook just doesn't sync with Google, and Google doesn't sync with Outlook. If you use both, MS Outlook and Gmail or Google Calendar, you know how frustrating it can be that these absolutely necessary email services refuse to communicate with each other. To add to the frustration, if you have an Android phone, the contacts also don't sync with your Outlook contacts. That's where CompanionLink for Outlook comes to the rescue and solves both the problems. It syncs Outlook (2003, 2007, 2010, 2013), Gmail and Google Calendar automatically, so that we don't need to repeatedly enter the same information into all our devices, or have clashes between our calendars and contacts. Once you've synced your Android and your Google data, your Outlook data is automatically synced with your Android phone as well. There's a 14-day trial post which you can either buy the full license or subscribe for three months. Though the \$50 price tag for the one-time license might seem daunting, CompanionLink is another

worthy add-in as it saves us from performing an escapable monotonous task.

Organise your documents with More Add-in

More Add-in is an absolute beauty and makes you wonder why Microsoft didn't add this feature in MS Office in the first place. So what does this add-in do? It gives you a collapse and expand feature in Word 2003, 2007, 2010, 2013. Sounds trivial right? But, only when you start using it do you realise the value of this particular feature. Especially helpful when you work with long documents containing blobs of data; it helps you reduce the clutter in your documents, allowing you to access the paragraph of text you want, when you want it – easily letting you hide the data that you don't want to see at the moment. You

don't need to combine or merge anymore; all you need to do is click on the triangle beside the block of text that you want to collapse/show. This tool also lets you make collapsible lists – thus allowing you to have a collapsible for each and every member on the list – thus making it extremely concise, clutter-free and organised. You're allowed 10 free uses of More Add-in after which you can buy the licensed copy for \$20.

Declutter with Office Tab Free

Opening multiple documents in Office is usually a pain, but Office Tab makes it a much smoother experience. It gives the MS Office suite (2003, 2007, 2010) including Word, Excel and PowerPoint a tabbed interface, just like your browser. So with each document opened in its own tab, it's much easier to
