

## Android 4.4 - KitKat

Say "no" to Key Lime Pie! Google has officially partnered with Nestle in order to bring the next Android 4.4 ... KitKat. <http://www.android.com/kitkat/>

## Blaupunkt's new subwoofer

The GTb 8A claims to deliver superior bass in your car audio system. It's 11-inch deep and has a 75W RMS amp built in

### LETTER OF THE MONTH

✉ Hello, this is my first mail to you. I'm a 15-year-old guy. Due to my ability of reasoning and understanding of any given system and tech gadgets, my friends recommend that I read your magazine. I invested my entire birthday money on buying three issues of the magazine. You guys are really fabulous.

While I could understand most of the articles the rest just went over my head. Could you please explain any one topic related to the fundamentals of computer (hardware and software) in each of your issues? I know your magazine is read by big company owners, great programmers, innovative hackers and tech geeks, but believe me it's also read by people like me. If you can, please start a different section for this.

I noticed you guys debating over packaging issue. Well, it's not that tough. If you know where the tapes are and you cut them from in between with the scissors you can save your precious material. I would recommend using coloured glittery tape that won't camouflage. Also, you can use a harder plastic which has dents and shapes in which you can fit things. It would be better for

3 reasons: it won't cause any wear and tear, it would be good to show off your products and it's a cheaper plastic. After all, your magazines are essential for everyone who wishes to do something in the tech world.

And last but not the least, if you ever wish to give me a T-shirt, I'm ultra-slim and 5'4" in height. I hope that you're a bunch of young guys and will consider me as your friend.

*Yash*

✎ We're always glad to hear from new readers of the magazine. Our Digit 101 section was specially created to cater to the needs of readers like you.

In this section we talk about technologies at a very basic easy-to-understand level. And don't worry – as with anything in life you'll pick it up soon enough. All you have to do is keep reading and soon you'll be able to appreciate those difficult "going over my head" types of stories in no time. Lastly your not-so-subtle hint dropping has worked. We've selected your letter as the letter of the month! Enjoy!

Do keep writing in.

*Siddharth*

separate every time, it helps a lot. Another change I'd like to see is the placement of the specs sheet at the end of the article which builds interest in reading. This is my opinion, but there must be a reason for doing this that I may not be aware of. The rest was great. Please continue doing the same. All the best for the future.

*Harsb Kburana*

✎ We're always happy when our articles get out readers' brain cells working over time! It's why we write in the first place. Your suggestions have been noted and we'll see what we can do in the future. We're always open to good feedback. So please don't stop writing to us with fresh opinions and feedback whenever you feel like it.

*Anirudh*

✉ Hey Team Digit. God only knows how long overdue this letter is. I, as a part of an ever-growing community, have leached off of the plethora of tech whiz at Digit, since...forever, I guess. But never once did I take out the time to thank your prodigal team for their stupendous contribution this magazine has made through its impeccable effort in wheeling out the best and the latest in techno-porn. And so here it is: Thanks. For being able to invoke the same amount of inspiration, thought and wide-eyed awe and wonder in, once, the bespectacled geeky lonesome schoolboy and, even now, the computer engineer bored to death at his pre-templated (not a word, I know) desk job. Honestly, with office, it's not been possible to keep up with Digit recently and that's a very sad

predicament for me personally and I plan to change that.

Till recently I was using the Xperia P and honestly I was tired of the same old Android look and feel. Apart from the apps, it wasn't very interesting. And hence, exploring the ecosystem I chanced upon Windows Phone 8 – A very unlikely choice for me, but now I'm slowly falling in love with the smooth-flowing, almost seductive, interface, its simplistic transitions and its stellar performance. And judging from the rise in sales in Windows mobile devices this spectacle from Microsoft is steadily amassing quite a following. It's hard to imagine any other platform replacing Android (especially in this part of the world) as the new behemoth in this mobile OS market. But Windows Phone holds all the promises. And now I've decided to go for Nokia Lumia 920 and make the transition to something new. I looked under every nook and cranny for anything to do with the OS and how it works, and was stumped when I couldn't find anything in Digit. I'm not aware if you've done any issue on WP specifically and so as a future WP user, I request you to please come out with a cover story about WP 8. Not just from the user's POV, but also what it means and takes to be a developer for this platform and the tricks and tools of the trade. You might have done a similar thing already and if you have, my sincerest apologies for this backdated request. If not, I look forward to witnessing the spin Team Digit puts on the story of the mobile platform that I've fallen in love with.

Keep up the good work.

*Partho*

✎ Glad Digit could be of service in your formative years. As for WP8, it has its plus points, but everyone on the team who's used it has come away disappointed. While the devices themselves (920 included) are excellent, the number of issues we've encountered with the platform are too numerous to list. That said, we've published complete tutorials and the relevant SDKs in our DVDs in the past. You can back order any of our previous issues (if in stock) at [www.thinkdigit.com/store](http://www.thinkdigit.com/store).
