Must have apps for your android cell phone

We often buy smart phones and are not able to make complete use of their potential. Here are some basic must have apps which can unleash the capabilities of your smart Android device and help you use it better.

1. MX player: This is the best third party video player present in the Android market. It plays almost all recognized video formats (.mp4 , .avi , .mkv etc). It has a very convenient and user friendly interface to adjust volume and brightness right from the screen. You can pan and zoom the video directly, as well.

2. Power Amp:

One will be amazed by the sound quality delivered by this player. It contains one of the best and finest equalizers among music player apps. Once you customize the bass and treble, you will never return to your stock music player, even if it is as good as Beats Audio.

3. WordWeb

We often expect a dictionary in our smart-phones , but are unable to find a good offline dictionary which does not require Internet access all the time. WordWeb Pro is the best offline dictionary that your smartphone can use.

4. File manager

When we need to transfer or share files from our phone, File manager is the best app. It's also very user friendly when it comes to dealing with zip files since it has all the required options available. You don't need anything else.

5. Myappsharer

Ever been in a situation where you liked some app on your friend's Android phone, but you did not have access to the Play Store to download it to your phone? With this app you can just share the app with him and ask him to forward the apk of any small app which you liked in his cell phone via Bluetooth or other social apps.

6. All in one tool box

This tool helps to clean your phone's RAM and cache memory effectively without bringing any kind of lag in itself. It has many other features like SD clean, which cleans all the temporary thumb images eating up your memory card space.

7. Flash light

This app simply converts your LED flash to a torch light. With its widget on your home screen, you can turn on the flash light by just tapping once on the screen widget.

8. Super Backup

This back up app not only takes back ups of your contacts, messages but also the apk of all the applications you ever installed. You can mail these backups of contacts and retrieve them any time you want using the same app.

9. Color Note

Sometimes we randomly see some information and want to remember it for later use. This app is basically like Windows' Notepad, and allows you to store the info in different colour codes according to importance.

10.Free SMS India

At times, if you run out of balance in your message pack and want to text your friend, who's not on WhatsApp, something important, just login with any of the gateways

(way2sms , 160by2, indyaroeks, fullonsms) and send messages free of cost to any mobile across India (the app does require Internet access though).

11.Barcode scanner

This app not only allows you to scan bar codes but QR codes too. We frequently see URLs in the form of QR codes and this app works well to deal with them. What's great is that the app works even without a front facing camera on a phone.

12. Viber

This is one of the best messengers in a group that includes venerable names like WhatsApp. The distinguishing feature of Viber is that it lets you directly connect over voice with the other person in the app's contact list. Viber has recently reduced voice quality to make it feasible for 2G users too.

13. Night mode

This app creates a small dark film on your screen which results in reduced brightness of your display. It does not decrease battery drain, but proves very useful when used in dark areas.

14. Share via HTTP

This app helps you share files among many devices simultaneously. How does it work? All the devices need to be connected to the same WiFi network. Now you can share any file from your gallery or through a file manager. This app works best with a barcode scanner app installed. Using such a scanner app, you can convert the url into QR codes and then easily scan and use it.

15.Opera Mini

This is the lightest browser in the Play Store and is only around 1MB in size and can be easily used when the Internet connectivity isn't very good unlike other browsers.
