Apple launches the iPhone 5S and 5C

Apple finally lifted the veil off the iPhone 5S and the smartphone hasn't surprised anyone in terms of the features on offer thanks to the rumour mills.

Apple has upgraded the power package on the iPhone 5S, with the new A7 chip, which is claimed to be twice as fast as the iPhone 5 in terms of the CPU and graphics performance. For the first time, the phone will see a 64-bit architecture, with iOS 7. The OS is backward compatible with 32-bit apps because the other devices getting this update

are not compatible with the 64-bit environment. The A7 chip also supports OpenGL ES version 3.0, which will allow for even higher quality graphics. There's also the new M7 Motion Coprocessor that gathers data from the accelerometer, gyroscope and compass to offload work from the A7, for better battery life.

The iPhone 5S adds a feature called Touch ID, which is Apple's name for the fingerprint sensor capabilities. The sensor is built into the home button itself, and Touch ID uses a laser cut sapphire crystal, together with the capacitive touch sensor to take a high-resolution reading of your fingerprint and provide better analysis from most angles. Touch ID can also be used as a secure way to approve purchases from the iTunes Store, App Store or iBooks Store.

The rear of the smartphone has an 8MP iSight camera and showcases a 15% larger active area on the sensor – the larger f/2.2 aperture with 1.5µ pixels aimed at better low light performance. The camera is accompanied by the new double LED flash, which Apple calls True Tone. It consists of two LEDs – one with a cool colour tone and one with a warm tone. The iPhone 5s also includes a new Burst Mode, Slow-Mo video with 120 fps, a new FaceTime HD camera for better low-light performance and audio-only FaceTime calls with iOS 7. The new

Apple iPhone 5C

Panorama mode would clock up to 28 MP and the exposure will be adjusted automatically during the pan, instead of being stuck with the preset values that may not work well with the differing environments in the same shot.

The iPhone 5S supports 13 LTE bands, the maximum among any smartphone currently available. Additionally, the iPhone 5S has dual-band 802.11 a/b/g/n Wi-Fi support for up to 150 Mbps transfer rates as well as Bluetooth 4.0.

Apple claims that the 1440mAh battery, with iOS 7, will offer 10 hours of talk time on 3G networks, up to 10 hours of web browsing on Wi-Fi and LTE networks and up to 8 hours

on 3G networks, and up to 10 hours of video playback and up to 40 hours of audio playback.

Moving on to the iPhone 5C, where C stands for colours, not cheap. The smartphone sports a hard-coated polycarbonate body with a steel-reinforced frame inside for a solid, sturdy feel. It's available in bright colours: blue, green, pink, yellow and white. The iPhone 5c carries forward most of the internals of the iPhone 5, but is thicker and heavier – 9mm v/s 7.6mm – and – 132g v/s 112g. Other specs include a 4-inch Retina display (640 x 1136 pixels), Apple A6 chipset, iOS 7 out of the box, 8MP camera, 100Mbps LTE connectivity, Wi-Fi a/b/g/n and Bluetooth 4.0. Like the new iPhone 5S, the iPhone 5c also supports 13 LTE bands.

To complement the all-new iPhone 5c design, Apple has created a line-up of soft, matte, microfiber-lined cases. These silicone cases will each feature unique circular patterns allowing the iPhone 5c's colour to show through as well. There are five iPhone 5c colours and six cases to choose from. Apple wants you to mix and match for dozens of fun combinations. Each case is priced at ₹1,804.
