

Humanity close to extinction

Groups like the Near Term Extinction movement and others are saying it's pretty much over for us: <http://dgit.in/byebye1>

Foreigner essentials

What things about your country should every foreigner know about? This quora thread has some brilliant answers: <http://dgit.in/facta1>

Microsoft Sculpt Ergonomic Desktop

This is the culmination of Microsoft's continued "research and investment in ergonomics." The Sculpt is a combo of an ergonomically designed keyboard and mouse. The keyboard has a split design, resembling a gradually rising wave that reaches its peak at the centre of the input device – this apparently lets you rest your palms and fingers in a natural, less stress-inducing posture while typing. The mouse is taller than most mice you've used to reduce carpal tunnel build-up, and its angle is designed to keep the forearm at rest. It's available for a price of ₹8,086. Small price to pay for the future of your hands, right?

Ergonomic gadgets are cool. Your body will thank you!

Herman Miller Mirra 2

For a sedentary job, which involves sitting cooped up in an uncomfortable chair for hours, the new Mirra 2 from Herman Miller is a heaven sent. It's an improved version of the +10-year-old Mirra, and promises to provide just the right level of firmness and support to help a person's body adopt healthy postures. All sorts of posture, height and tilt-related adjustments are customisable, and a redesigned seat frame allows for removal of foam from under the seat. The chair looks elegant and free flowing but at the same time is built quite well, able to support anyone weighing upto 150 kg.

Though your office probably won't be able to afford it (price yet undisclosed), why not get it for your home office?
