Gunnars Glasses

With so many hours spent gazing into illuminated digital displays, think of all the strain your eyes withstand? Worry not, for Gunnars in the business of crafting fancy spectacles or glasses claims to be able to protect your eyes from ambient light. It does this through some wizardry deployed within its glasses – a sort of layer or film – that prevents excessive light from entering your eyes. Gunnars has glasses for all sorts of users, whether you're a gamer or an avid PC user spending a considerable amount of time in front of a monitor. We've had a chance to use these for several months, and our team's opinion is divided on its efficacy. But since they're available in several shades and frames, and not insanely expensive (starting at ₹4,490), let your eyes be the judge, eh?

Biomorph Personal Desk

Another trend in ergonomic design is working at your desk not just while sitting but also standing. And investing in something like the Biomorph Personal Desk is a smart way to work either way. It has a desk and a keyboard deck – two separate moving parts – that are about 4.5 feet wide and allow for height adjustment through a crank, depending on whether you're sitting or standing. The whole thing is built well with a reinforced steel frame, and the main desk surface can easily accommodate up to four PC monitors. The whole thing comes apart and is easy to assemble (a guide is included). This is for people who're really serious about ergonomics. Available for ₹1,21,037.

FootTime Foot Mouse

How about a radical new way to make use of a severely under-utilised pair of limbs while at your computer desk, and no we aren't referring to your hands. It's your legs we're talking about and introducing them to a whole new meaning of foot-tapping...on the Foot Mouse! Just slide one foot into the mouse "slipper" and the other on the "pedal". While one foot lets you point the cursor, the other interacts with six buttons and a scroll wheel. We expect this ₹8,712 device to have a learning curve, but to ease the initial difficulty some of its buttons are configurable as per your comfort level.
