

53 Kindle Paperwhite

In the world of ebook readers, Amazon's Kindle is still head and shoulders above the rest. And that's an understatement. With an innovative new front-lit e-ink display (yeah, read more about it here: <http://dgit.in/18D3pFm>), the Paperwhite literally mops the floor with competing products. And guess what? Amazon just upgraded it with an even better display. If you read a lot on your tablet, give the Paperwhite a try. It will blow your mind away.

54 Samsung Galaxy Gear

Is this Samsung's knockout punch to Apple in the wearable tech segment? A bit premature to say for sure, but the Galaxy Gear's the best "smart watch" we've gotten our hands on till date. Not only does it come with smart features – custom apps, voice recognition, camera, and more – it looks great as well. Like what you see? Maybe smart watches aren't such a bad idea after all?

55 Alienware 17

How do you make heads turn at a LAN gaming party without trying out those hidden kung-fu moves? By getting an Alienware, of course. Sporting a metal screen lid with angular accents, and a nice, chunky, reinforced plastic exterior, the Alienware feels rock solid and very sturdy. Not counting its comprehensive connectivity features, the machine also packs in superior internal hardware, not to mention the new Intel 4th generation Haswell processor and NVIDIA's gaming chops. Worth buying if you're a laptop gamer.

56 Nikon CoolPix S6500

The S6500 is a very compact, no-fuss camera. It has great optics and a build that can rough it out if need be. The ergonomics may be a hit or miss, with closely placed buttons, but if we can adapt to varying keyboards, then we can surely get used to the slightly smaller buttons on the back of the S6500. It's slow to start, but that's about its only problem.

57 Steelseries Siberia V2

For uber gamers willing to go the extra mile for ultimate audio, only the utmost precision will suffice and the SteelSeries V2 based Diablo III and Frost Blue headsets are the only ones that can satisfy them. These headsets impressed us with the precision of their reproduction and pin-point positioning of the in-game source. The design has compromised on bass in favour of precision of reproduction and it shows. For a hardcore gamer with only gaming performance in mind, these are among the best headsets; if a little expensive.

58 iPhone 5S

Possibly the most-awaited technology product of the year, the iPhone 5S finally launched last month in its full glory. Packing in a home button that doubles up as a fingerprint identity sensor (dubbed Touch ID), an A7 chip with 64-bit architecture, and the impressive iSight camera, this phone is certainly worth a double take. It's available in three colours, and the gold one is our pick. If money's no problem, you gotta have one of these.

59 Samsung 7500 Smart TV (UA46F7500)

If you believe in the adage that "A TV isn't just a TV anymore", then the Samsung 7500 Smart TV series is one such 46-inch television set you should be splurging on. It has stunning looks, very good performance, a neat set of Smart TV features and the razzle-dazzle of stuff including motion gestures and the new, minimalistic remote control. Oh, and it also has a quad-core chip inside. Surprised?
