

60 Samsung Galaxy Note III

There's a brand new Galaxy Note phablet on its way for all who can't decide between a tablet or smartphone purchase. The device's 5.7-inch Super AMOLED screen touts a Full HD resolution, and its frame packs a 13MP shooter with a whole host of dazzling features. It packs in a whopping 3GB of RAM, which should deliver a pleasant user experience and performance. And it comes with a stylus, too. The Note 3 comes out this October. Indecision, begone!

61 ZOTAC ZBOX NANO ID65 Plus

The ZOTAC ZBOX NANO is a very tiny PC. Barely larger than the average school-going kid's tiffin box, ZOTAC has managed to pack in an Intel Core i7 processor and 4GB of RAM. Don't let the diminutive size fool you though, this is easily the most powerful tiny PC we've reviewed this year, and if you're looking to buy one (and can afford the price tag) we definitely recommend it.

62 NVIDIA Shield

If you want a powerful handheld gaming device (kinda like the PS VITA or Nintendo DS), check out the NVIDIA Shield. It's like an Xbox controller with a 5-inch, 720p touchscreen display fused to it, and it runs on a 1.9 GHz Tegra 4 SoC – one of the fastest out in the market this year – and supports streaming games from your PC (e.g. any controller supported game on Steam). Android games run spectacularly, even if it lacks a comprehensive game library for now, and the Shield's touted positively for its good battery life.

63 MacBook Pro with Retina Display

Apple's MacBook range is renowned for stunning, well-calibrated displays, and with the Retina Display MacBook Pro Apple ups the ante even more. Apart from the fact that it's expensive and better configurations are available from competing OEMs at a lesser price, the MacBook Pro's display screen is unbeatable. There's also that bit about a Soluto survey proclaiming the MacBook Pro as the best Windows PC to buy because of its lowest rate of BSODs, crashes and the lack of bloatware.

64 Sony VAIO Pro 13

At 1.06 kilograms, the Sony Vaio Pro 13 is the lightest, 13-inch touchscreen, Windows 8 ultra-book that money can buy today, and its full-HD touchscreen

display is one of its highlights. The Vaio Pro is built well and very well suited for frequent travelers and business users looking for a sleek machine that exudes class and craftsmanship. It's a zippy machine, minus the gaming, and offers very good battery life.

65 Samsung Galaxy S4

The S4 is another great Android phone of this year, and compared to the HTC One, the S4's plastic case doesn't go well with its flagship tag. It has great internal hardware, offers very good performance, and proprietary features. There's very little to separate it from the HTC One as the performance of both phones is very good, and absolutely neck and neck. Whether you buy this or the HTC One depends on whether you bought the SIII last year. Definitely worth considering, especially if you have the moolah!

66 Bang & Olufsen Beosound 8

This dock is in a league of its own. The Beosound 8 is a monster iPod Dock that produces unmatched clarity and detail. It easily transgresses into audiophile territory and still remains a device for casual use. In terms of looks, the Beosound looks drop dead gorgeous. Of all the iPod docks we've tested, this is by far the best one we've seen.
