

67 Razer Ouroboros

Razer has put in three years of hard work into the creation of this mouse and it shows. Offering a mind-boggling amount of customization options, the mouse is exceptionally well-built and the precision and control that it offers is unparalleled. This is unquestionably a premium mouse, but it also demands a premium price. Regardless, in the right hands this mouse is a killer and a must-have accessory for the true gamer.

68 Sennheiser HD 700

This is just a great headphone with superlative sound quality, period. The overall sound is almost sparkly and so open, you get a brilliantly wide soundstage. As for the performance the headphones deliver brilliant dynamic range – you'll hear everything from the quietest clink of an idiophone instrument, to the loudest scream of a wailing guitar. This is worth every rupee it demands.

69 Epson EH-TW8100

This one's by far the best home entertainment projector to grace our labs. The thing is massive but elegant, feels premium on touch and sits sturdily on its adjustable legs. The TW8100 is seriously bright (maybe a little too bright) and effortlessly puts a spell-binding, exquisite cinematic performance, if you're a big screen fan. It supports 3D and a whole host of IO options. If you're thinking of setting up a home entertainment room in your house, this is well worth your consideration.

70 Cooler Master Notepal Ergostand Lite

We were all very impressed with CM's Notepal U laptop cooling stand last year, and we're hearing that the new Notepal Ergostand Lite continues its legacy. Supporting up to a 15-inch laptop, the Ergostand Lite sports an elegant mesh design for better airflow and one huge 160mm fan with adjustable positions. It's built well and should be on your radar if you're facing laptop heating issues.

71 Motorola Moto X

If you want to get your hands on a phone that isn't mass produced in China, consider the Moto X – the only smartphone assembled fully in the US of A. The phone has a customizable back lid, the design of which can be made-to-order (wood, plastic, metal, etc). Various independent reviews peg the smartphone's build, features and performance to be quite good, and its appeal is comparable to any flagship. An unlocked developer edition of the Moto X just went up for sale too.

72 TP-LINK M5350

The M5350 is a portable 3G Wi-Fi router. It sports a stylish cobblestoned design and finish that's unique and premium. Slip in a 3G-enabled SIM inside the M5350, plug in the device to a laptop via USB and you're online within seconds. Setting it up is a breeze. The device also acts as a Wi-Fi hotspot, allowing more PCs to share the 3G Internet connection. A great device to have on the road.

73 Google Nexus 7 (2013 edition)

In case you were sleeping under a rock, allow us to jog your memory a bit. Google released an updated Nexus 7 in July this year which is probably the best Android tablet to buy right now. It's quite sleek, well built, and packs in plenty of performance muscle. Being a Nexus device, this tablet will automatically be prioritized to receive any future Android updates before anyone else. At the earliest, it's expected to launch later this month at around ₹20k.
