FOUR CORES AND 9 TABLETS AGO

Manufacturers brought to our doorstep powerful devices priced around ₹20,000

Tablets have come a long way since they first started sprouting way back in 2010. At the time it was hard to justify purchasing a tablet and it was considered as a product for the elite class – a luxury

device. Everyone aspired to own an iPad and its monopoly frustrated the competition. In the years that followed, we have seen the rise of Android as a stable smartphone as well as tablet OS. Tablets running Android seemed to launch everywhere. Over the past three years we have seen some impressive as well as disturb-

ingly horrible tablets launch that run on Android. The good thing is that today, for a budget of ₹20,000, you can get your hands on a device that not only has some impressive specifications, but build quality and performance capabilities as well.

The market is flooded with so many homogenous

Android tablets that at times, it is hard to distinguish the good from the bad. Sure, you have the tried and tested brands like Acer, Samsung, Sony and more bringing some great products to the table, but they haven't necessarily tapped all the price points at which the masses are looking to pick one up. With the
