Portable HDDs Test

any points for this aspect. Nevertheless, the drive's performance was at par with most other drives. Similar to other Toshiba drives, the DTP110 also has an internal shock sensor built inside the drive for protection which is a welcome added feature. Next up, we have the Toshiba Canvio Connect v73600-C. This was one of the more trendy drives in the test with the user having the option of purchasing the drive in different colours. The one we received was coloured blue and had a glossy finish. We can't stress on this much but here again we would like to mention that drives with plastic covering and glossy finishing have a tendency to get easily scratched and so you must be cautious while using them. The v73600-C has cloud storage support as well with the user getting a storage space of 10GB. Performance wise, the v73600-C was strictly average and you shouldn't expect much from it in that department.

Moving forward, we have the Toshiba Canvio Basics V63700-H portable drive which was the

only 2TB drive in the test. The V63700-H has a thicker profile than most other drives but that is because the drive has double the storage space. The V63700-H has a simplistic design element to it and there isn't anything fancy about the looks of this drive. Then again most people wouldn't care too much about it. This drive also has Toshiba's internal shock sensor, seems like Toshiba has made it a standard element of the product design. At a street price of ₹10,500 its price is twice that of most 1TB drives in the comparison test but if you really need so much space in a portable drive, you can consider the V63700-H.

The last 1TB portable drive in the test was the Western Digital My Passport Ultra. This drive from is a lot similar to the older portable drives from WD and its design could've been better. This was the only portable drive that came with a pouch which is a nice touch. The WD My Passport Ultra supports cloud storage by

Transcend StoreJet 25M3

making use of a standard dropbox account. The performance of the WD My Passport Ultra was very good and it ranked among the fastest drives in our test but it wasn't the fastest one. At a price of ₹5,675 this drive is a bit on the costlier side compared to the other 1TB drives.

Verdict(1TB Drives)

We award **Transcend StoreJet 25M3** the **Best Buy Award** for being a great value for money and feature rich drive with some decent performance figures. But you may also like Seagate Backup Plus 1TB which was the cheapest 1TB portable drive in the test.

OVERALL VERDICT

When you speak of sheer performance, the portable drive that stood out was the **Silicon Power Armor A15** and it wins the **Best Performer award** for having the most consistent performance in all facets of the test. Not only does the Armor A15 perform well, but it also has a great build quality with a military standard shock proof rating. We actually drop tested the Armor A15 to verify the company's claim and we must say that the Armor A15 lives up to its expectations. And you really can't go wrong with this drive especially since you can buy it for a street price of ₹5,400. The **Toshiba Canvio S3600-A** on the other hand wins the **Editor's Pick award** for being one of the next best performing, feature-rich and well built drive with a great value for money. The slim design of the S3600-A is nice and will be liked by many prospective portable hard drive buyers.

So we hope you can find the right portable drive for your use from this comparison test. But before buying any of these drives make sure you check out our cover story this month to get an idea about the mistakes to avoid while shopping this festive season and also to get to know about great deals or coupons if any from online retailers.
