Arise, haptic interfaces!

Imagine the ability to touch the fabric of a gadget to control it. The future's arriving faster than you imagined. <http://dgit.in/16fyjd6>

Sony Xperia Z Ultra

The largest, most powerful phone out there?

The Xperia Z Ultra borrows many design elements from the Xperia Z - the metallic frame and tempered glass, the aluminium power key on the right side spine. It's also just 6.5mm thick and weighs in at a measly 212g. If that wasn't enough, the phone is water-proof. The massive 6.4-inch display is something to behold. At "just" 344ppi, the resolution seems inferior to that on the Xperia Z (441ppi) and the HTC One (469 ppi), but this shouldn't matter in the real world. In the real world, the display on this phone is fabulous. It's exceptionally bright and easily legible in sunlight. Text scaling is very disappointing though. Such a large screen requires a larger font

Price
₹46,990

and having to constantly squint at the screen is not fun.

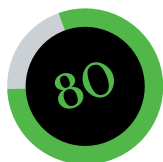

Another interesting feature of the phone is that you can use even a pencil or pen as a stylus. We've tested it and can assure you that it works.

The Xperia Z Ultra is easily the largest smartphone we've ever tested, and also the most powerful. Synthetic benchmarks put it ahead of the Snapdragon 600 and the octa-core Exynos from the Galaxy S4. The performance is staggering, but the average user won't notice any difference in day-to-day use.

As a primary phone, the phone lasted well over 24 hours with an average work-load - some browsing, YouTube and plenty of IM, not to mention two hours of phone calls - with the screen brightness set to auto. An impressive result for such a large and powerful phone.

Such a large and powerful phone does have a niche audience though, but for that audience, it's an excellent choice.

Lemon A4 Full HD

A smartphone with a gorgeous display

Price
₹17,999

Despite a plastic back, this is one of the better-built devices we've seen in this price range. The display is vibrant and is easily the best feature on this phone. The wide-viewing angles and the crisp text and images contribute to this, more so because videos look great on the device. The phone does lag a bit under heavy loads and the camera is noisy in low-light. The phone is a dual-SIM one and supports a regular SIM alongside a micro-SIM. It's an average phone and average performer with a great display.

WickedLeak Wammy Passion Z Plus

A budget quad-core 1080p phone

Price
₹15,990

This plastic-backed smartphone looks attractive. The rear panel is removable and gives easy access to the two SIM slots and the microSD card slot. The OGS display looks nice and helps maintain that slim form factor. It's vibrant and great for reading and consuming content. The UI is stock Android. The hardware isn't very great and lag is very apparent when gaming or under heavy loads. The camera is also just average and, as expected, only performs decently in low-light.
